Curriculum Review Cycle

CURRICULUM DESIGN AND PROGRAM EVALUATION MODEL

The curriculum design model is a three-year cycle. The cycle includes researching best practices while reviewing existing data; assessing, planning, refining, and developing the curriculum; and implementing and monitoring the curriculum. The model recognizes the interplay between curriculum and instruction and accounts for the best professional practices as recommended by staff, professional consultants, professional organizations, and research.

Research Best Practices and Review Existing Program Data (Year 1)

- Select core leadership team
- Examine state and national curriculum movements
- Review the literature, research, and reports from professional organizations
- Review present student levels of performance based on existing district data
- Prepare for Year 2 and expand the team

Assessing, Planning, Refining, and Developing (Year 2)

- Review district philosophy and goals
- Update goals for the program
- Identify essential curriculum
- Evaluate curriculum materials for multicultural education
- Write appropriate curriculum materials
- Align with state or national standards, develop common assessments
- Select instructional materials
- Determine professional learning for implementation at the onset of Year 3

Implementation and Monitoring (Year 3)

- Professional learning for initial implementation
- Begin use of assessments
- Monitor the progress of the new program; revise, as needed, at the end of Year 3
- Determine future staff development needs

	Year 1 Research Best Practices and Review Existing Program Data (Year 1)	**Year 2 Assessing, Planning, Refining, and Developing (Year 2)**	**Year 3 Implementation and Monitoring (Year 3)**
2022-23	-	-	K-12 ELA
