

Margie Ramsdell, Craftsbury: "These are amazing! The thermometer in my kitchen/dining room where I "live" reads loud and clear that the inserts are retaining the heat overnight by a noticeable number of degrees more than in the past!"

Rudy Chase, Craftsbury: "When the temperature outside is around 32 degrees, we used to get snow melting on the three skylights, but not anymore with the inserts put in".

Val Lamonda, Craftsbury: "When it was 22 below, those windsor inserts saved my ass! You know that they are working when the first time it was windy the wind popped out the inserts. I had to secure them into place."

Tobin Porter-Brown, Albany: "The window inserts do an incredible job of reducing the drafts in our house. Before the inserts you could feel the wind blowing through our double hung windows. We didn't have the resources to replace those windows yet so the inserts are an effective solution."

Susanna Bowman, Albany: "Bones the cat says 'now that we have 5 windows insulated with inserts its warm enuf on the sunporch to bask in the sun in the winter!"

And Jim the photographer says: "I can use my sun porch studio a month longer at each end of the seasons -spring and fall"

Linda Roberts, Craftsbury: "I am grateful to have been part of the window insert program this year. With some minor tweaking (old house, windows not perfectly square) the inserts are doing their job as the temperatures have dropped. I look forward to mitigating the rising heat costs by having my windows covered. I am glad that this program exists. Thank you to everyone who made this possible!"

Nancy and Jamie Milholand, Craftsbury: “We purchased quite a few and will probably get more too. We enjoyed the process of helping to build them too. Let's just say that they have been invaluable in reducing heat loss. This is our first Vermont winter, and we need more insulation for sure- but having the window inserts really helped. Especially because of the wind and being located in an open area. We hope to afford to do more. Thanks for this terrific program! Much appreciated! Saves energy. Saves dollars. Win, win!

Lizabeth Maris, Elmore: "I am so grateful for these window inserts! The moment the last edge of each insert was pressed into my sills, I could feel the cold air breeze being sealed out. These inserts made a huge difference in my house from day one. They are easy to handle and install, lightweight, and attractive. Thank you to this amazing program and all the people that facilitate, communicate, measure, build and work hard to bring a quality product to us Vermonters up here in the far North!"

Sally Searles, Wolcott: “On this very cold morning, I am writing to tell you that the inserts have been a huge help in keeping our home warm. After 50 years of heating our home with wood, we are doing so with oil. Big change for us and not something we wanted to do... These inserts are a huge help!”

“They look very nice. Hard to tell they are there!”

“These look great in the windows and have been a big heat saver for us. The program made it possible for us to afford. The crew was respectful and swift when measuring and building the inserts was fun!”

“Wonderful program, wonderful product!”

“These are great! I'm not sure about reducing coasts but they must. My home is MUCH warmer!! Thanks to all who make this happen.”

“They look very nice. Hard to tell they are there!”

“Wonderful program, wonderful product!”

“They are a terrific addition to our home. We will purchase more.”

“This is our first season so we have not taken them out yet, thus the answer for don't know for ease of removal. Highly recommend window inserts. Plan to get more this year.”

“They were a great, easy, energy efficient solution!”

“Our inserts are in the sun porch which we can now use about 2 months longer than we were able to previously which is nice. And only one has had to be rebuilt.”

“Super fun to make.”

“My window inserts have made a big difference even in this old house. I was amazed at how well they fit given this house is so old. Kevin Gregoire does an excellent job coordinating it all and I am very grateful to have them”

“Less mold on the windowsills too!”

“This is a fantastic program which everyone should participate in! We enjoyed building and the inserts were very easy to install (one or two weren't a good fit but we added foam strips and it works fine). We'll be back for more windows next year. Thank you!”

We're very happy with our window inserts! They definitely save heating oil, and make our house more comfortable. Highly recommended!"

"We live in a sprawling old drafty farmhouse and have inserts in all of our windows. We no longer need to stay in the 15 foot circle around the wood stove, as the warmth can move around the house and not exit at each window it encounters. Not only that, but instead of burning through 8-10 cords of wood, I am comfortable buying only 6 cords each year now!"

"The inserts have made a noticeable difference in the comfort of the rooms where they are installed. I have a dining table next to a window that used to feel quite drafty as I sat down to eat. No longer is that true! The inserts have eliminated the feeling of cold seeping in around the windows and I could not be happier with the results of my window inserts. Additionally, installing and removing the inserts is an easy one-person job and requires no tools or brawn. I plan to add inserts to my second floor windows at my next opportunity. These window inserts are visually unobtrusive and barely noticeable. What a great product!

And, participating in the optional insert-making workshops is a fun, interesting way to connect with others in the community"

"Highly recommended!"

"Since we heat primarily with wood, and since it has been a colder winter than we've had in recent years, we can't measure the extent to which we may have burned less wood. But, subjectively, we are warmer and feel less draft than before we installed them. Our visitors have commented that the room is warmer and that it's

much more pleasant to hang out there than in years past. I am absolutely certain that if our heat source were electric we would be able to tell you in dollars and cents how much we saved in heating costs”

“I brought them home and inserted the 6 inserts and they're great! Thanks for all your work.”
