## Paper idea 1

### [The SWEET/ENVO/GCW Harmonization Experience](#)

Mark's outline for a methods paper on harmonization - should cover GCW work, ENVO/SWEET work, tools, etc. and now should preview our intention to do this for environmental hazards and disasters

## Paper idea 2

### Cri du coeur - A best practice for semantic harmonization

[Link to document](#) - Derives from the The SWEET/ENVO/GCW Harmonization Experience

A start at a 5 page white paper for ESIP consumption. Perhaps should draw on the [ESIP Winter Meeting slide deck](#)

- Original idea for internal within esip
- Why everyone in esip should collaborate

## Paper idea 3

### Achieving the I in FAIR

The intent of this paper was to describe for the broader scientific community why semantics is important for making their data FAIR. This would be an external publication.

- Push to go broader than ESIP why doing semantics to make data fair and why they need to be harmonized
- This may already be covered in the FAIR is FAIR so this might be a lower priority.
- Technical paper? Ask for partners to contribute their own advice across ESIP? E.g. Helmholtz, USGS,...

# OTHER

## SWEET/ENVO paper

A 19 page dump of all of the issues anyone could think of. Not in any reasonable order; but a source of content and ideas. This is more a dump of ideas. Could use material from this in the others.
