

Group Collage

[Using Adobe Spark](#)

Each person in the group will create an individual collage. The source photos can come from any member of the group. Each collage needs to be created in a theme that brings it together as one piece. When all group members display their individual collages together, the entire group collage should work together as one piece. There needs to be something that ties all the collages together as one. This could be content/subject matter, shapes, color, texture, lighting etc.

Collages will be graded as individual pieces and as a part of the group piece.
