

## 日産スカイライン:ゴジラ

### Nissan Skyline: GODZILLA

このくるまは、日産スカイラインです。

日産スカイラインはでんきとターボとスポイラーと窓があります。二百七十馬力です。とてもかっこいいですね！

First let's talk about the story of the Nissan Skyline's history. The company Nissan had some economic problems so they decided to invest in a new project. If this project wouldn't have worked, Nissan could've ended up in bankruptcy, but they didn't, thanks to the success of the Skyline. They worked hard to create the new generation of Skylines. The Nissan Skyline R32 got the nickname "Godzilla" out of the factory because of the great things it provided such as horsepower, bodystyle, and technology. This car comes with 276HP (horsepower) but if it is well tuned and modified it can make up to 1,000HP. They are known as Skylines because they were designed using the same chassis (the skeleton of a car) for the next generation-R33 and R34. The R34 is the last Skyline, and the models made afterwards are called GTR's. The drawing below is an R34 Nissan Skyline- this car became famous because it was used in the popular movie "Fast and the Furious," which car enthusiasts love.

I choose to draw this amazing car because I'm a car enthusiast and I think this car is like a piece of art, from the bodystyle to the engine.
