Abstract

Your abstract should give readers a brief summary of your article. It should concisely describe the contents of your article. The abstract should be complete in itself, it should not contain undefined acronyms/abbreviations and no table numbers, figure numbers, references or equations should be referred to. The abstract should be suitable for direct inclusion in abstracting services and should not normally be more than 300 words.

Keywords: PSC.

Introduction

This should be concise and describe the nature of the problem under investigation and its background. It should also set your work in the context of previous research, citing relevant references. Introductions should expand on highly specialized terms and abbreviations used in the article to make it accessible for readers [1].

Method

The results section should detail the main findings and outcomes of your study. You should use tables only to improve conciseness or where the information cannot be given satisfactorily in other ways such as histograms or graphs. Tables should be numbered serially and referred to in the text by number (Table 1).

Table 1: Caption of the table replace here

Column Header Goes Here	Column Header Goes Here	Column Header Goes Here
Row Name Here	x	x
Row Name Here	x	x

Each table should have an explanatory caption which should be as concise as possible. Equations should be centered with equation numbers on the right-hand side (flush right).

$$y = mx + c \quad (1)$$

Discussion

This should discuss the significance of the results and compare them with previous work using relevant

references. Carefully chosen and well-prepared figures, such as diagrams and photographs, can greatly enhance your article. You are encouraged to prepare figures that are clear, easy to read and of the best possible quality and resolution.

Figure 1: Mention figure caption here

Captions should be included in the text. Figure captions should contain relevant key terms and be self-contained (avoiding acronyms) so that a reader can understand the figure without having to refer to the text. Figure captions should also reference the source of the figure if the figure has been reused from elsewhere Figure 1.

Conclusion And Future Prospective

This section should be used to high light the novelty and significance of the work, and any plans for future relevant work.
