Model Setup ✧ Custom B2

└── ★ · ☆ · ★ ──┘

Download VTube Studio from Steam. This is the recommended software. While the model can be loaded with other tracking programs, the results may change.

To load additional assets/items onto your model that may not be included in the file, please see the VTube Studio Documentation! **Editing the texture atlas or using the multiply/color change function is possible as well.**

Loading the model into VTube Studio:

1. Extract the model files into the VTube Studio [Live2DModels] folder.
   <VTube Studio.app-Path>\VTube Studio_Data\StreamingAssets\Live2DModels

2. Launch VTube Studio and follow the icons below to enable the model ↓

Model tracking can be enabled in several ways; between webcam, IOS, and Android tracking, IOS will produce the best results. Additional information related to tracking set-up can be found in the VTube Studio Manual.

Customization options and **examples** are as follows:

モデルのカスタマイズ

Enable the highlighted button with the customization toggled
to have it automatically load when opening VTube Studio!

Outfit Presets: it is possible to create different variations
(for example, removing the ribbon; changing the collar;
changing the shirt; changing the skirt or skirt length;
changing the sleeves) as each part is individually adjustable,
but note that some combinations may be incompatible with each
other or will require you to adjust the lengths in
customization.

Changing Colors of the Outfit: the multiply/color function in
VTube Studio. Additional information related to its set-up can
be found in the VTube Studio Manual.

FAQ:

1. Feel free to use the multiply/color change function or edit the texture atlas!
2. You can use it for streaming, commercially or non-commercially.
3. If you have any ideas for models in the future, definitely feel free to let me know!!
