[10th Sept 2025]

[Community Updates]:

- Exploring react version upgrade for packages like form-controls to react 16. We are targeting react 19 which is the latest released version
- Since it is a three version jump, we are targeting it sequentially
- [Makhate]: Any possibilities on using Svelte instead of React?
 - [Mohan]: No because our components are built on react and changing the framework is not a priority

Clinical app performance issue

[Tony]: It takes many seconds to load the clinical module. We are using docker compose on ECU and RDS databases. The machine has 4GB RAM.

- Implementation is in a small clinic in Madagascar
