Italian Protohistory, Bostel and Asiago Plateau (Vicenza, Italy)

Course ID: Course ID: ARCH 365BS

COMMON ONLINE INTRODUCTION: June 1-2-4 and 8, 2026

SHIFT ON SITE: June 21-July 12, 2026

Academic Credits: 8 Semester Credit Units

FIELD SCHOOL DIRECTORS

Dr. Cinzia Bettineschi, Faculty of Human Sciences, Education and Sport, Pegaso University, Italy
(cinzia.bettineschi@unipegaso.it)

Dr. Luigi Magnini, Department of Humanities, Ca' Foscari University of Venice, Italy
(luigi.magnini@unive.it)

OVERVIEW

The settlement of Bostel lays on a sunny promontory ca. 850 m above sea level in the scenic setting of the Asiago plateau (northern Italy) and holds a strategic location connecting the lowlands of Veneto and the Alps. The site was discovered in 1781 and soon after it started to attract the attention of several influential archaeologists and local scholars, especially in the golden age of Italian protohistory in the late 19th century. However, the first scientific excavations were carried out only in 1912 on behalf of the local heritage authorities. After a brief campaign in 1969, the investigations reopened only in 1993 with the scientific direction of prof. Armando De Guio, University of Padova. From 2021, the excavation permission moved first to the University of Sassari, to the Ca' Foscari University of Venice, and later to Pegaso University with the scientific direction of Dr. Cinzia Bettineschi and Dr. Luigi Magnini.

From a chronological perspective, the area was first frequented during the Late Bronze Age, but all the house units unearthed until now belong to the major occupation cycle of the Second Iron Age (6th-1st century BCE), which was abruptly interrupted by a widespread fire in correspondence with the Romanization of the area. From the cultural point of view, the site belongs to the so-called Magré culture, with influences both from the Fritzens-Sanzeno, aka Raetic world (alphabet, ritual activities, ponderal system, building technology) and the ancient Veneto (most common material culture types).

Recently, the site has been the heart of two major POR-FESR regional projects with European fundings, which promoted an innovative communication strategy based on Virtual and Augmented Reality, 3D modeling, immersive cinema, and gamification for the archaeological park and its Museum.

The Bostel di Rotzo excavation forms the heart of a 30-year research project aimed at unraveling the everyday life and identity of pre-Roman inhabitants in a mountainous corner of the Italian pre-Alps. This ancient village continues to offer a stunning control point over the surrounding valleys and during the 1st millennium BCE, it served as a critical waypoint connecting the Po plain of the Ancient Veneti with the Raetic settlements in the Alps. Due to its strategic importance, the area has remained significant throughout history, as evidenced by the abundant traces of trench systems and bomb craters from the First World War, which we explore using Modern Conflict Archaeology approaches.

Our field school stands out by challenging existing narratives of marginality and fostering a deeper understanding of these mountain communities, particularly in the context of the growing economic influence and military presence of ancient Rome in the last occupation phases of the settlement. Currently, our excavations focus on four main sectors, each featuring pit-houses, terraces, infrastructural remains, or craft activity areas.

Students participating in our program will be fully integrated into a cohesive and multidisciplinary research team. They will work alongside experts in landscape and digital archaeology, including UAV surveys, field recording using total stations and drawing, stratigraphy and formation processes, as well as in cleaning, documenting, and cataloguing recovered artifacts. Students also will learn how to use a stereoscopic microscope for studying archaeological materials in terms of production technology and use-wear analysis.

Practically, the excavation will focus on the following:

- Sector D: It is the largest trench, encompassing a pit house and its immediate surroundings, offering key insights into intra-site logistics and spatial organization. In 2023, we successfully identified the full perimeter of the structure, which features a monumental staircase likely leading to the cellar. This building, currently the deepest identified on the site at approximately 190 cm below the ancient external floor, shows strong parallels with structures in the Raetic and Camunian regions of northern Italy. In 2025, the removal of collapsed stones in the main room was essentially completed, revealing a charred

wooden loom with an associated loom weight and the burnt floor of the mezzanine. In the yard outside the house, excavation of two terrace levels uncovered a distinctive square structure, measuring 2 meters per side, built from carefully selected white calcite slabs. Inside, two large copper-iron ingots, totaling approximately 15 kilograms, were found. This area has been tentatively interpreted as either a storage space or a private shrine, with future excavation campaigns aimed at clarifying its function. For 2026, work in Sector D will focus on completing the removal of the collapse stones within the staircase area and on the systematic investigation of the interior spaces and their functional organization. The excavation will continue to refine the reading of previously identified floor surfaces and evidence of activities associated with the occupation levels. Removing the remaining deposits will allow for a clearer understanding of the stratigraphic sequence, with particular attention to the relationships between everyday living spaces, structural maintenance interventions, and the external yard. Concurrently, excavation in the calcite slab-structure will examine possible functional transformations and changes in use and occupation, linking these findings to cultural shifts observed in the upper levels.

- Sector C1: The excavation of sector C1 has been completed during the 2025 campaign; no additional investigation is expected in this area, which will be permanently closed before the beginning of the 2026 campaign.

- Sector C2: This sector is interpreted as the domestic area associated with the C1 workshop. In 2026, excavations will focus on the perimeter walls to investigate the initial construction phase, including the original entrance, which was subsequently blocked. Stratigraphic analysis and detailed documentation of architectural features will aim to clarify construction techniques, functional organization, and use phases. The investigation of this area is expected to be completed during the 2026 campaign.

- Sector G: Identified in 2017 through remote sensing investigations, this area has proven to be of great interest. Excavations uncovered massive stone walls just 25 cm below the current grass surface. Efforts have been made to identify the full perimeter of the structure, although this is challenging because part of the building extends into adjacent private fields. The structure underwent significant modifications, including the addition of new walls and the lowering of the original ground floor. Excavation in Sector G will continue in 2026, focusing on clarifying the building's plan and its construction phases. Special attention will be given to the relationships between rooms and to structural interventions identified in the currently exposed levels. The presence of high-value materials, including an inscribed amphora and ornaments with Etrusco-Padan influences, remains a key element for understanding cultural contacts and the role of this area in local settlement dynamics. The aim is to integrate architectural and material data to reconstruct a robust picture of the structure's original functions and its transformations over time.

ACADEMIC CREDIT UNITS & TRANSCRIPTS

Credit Units: Attending students will be awarded 8 semester credit units through our academic partner, Connecticut College. Connecticut College is a highly ranked liberal arts institution with a deep commitment to undergraduate education. Students are encouraged to discuss the transferability of credit units with faculty and registrars at their home institution prior to attending this field school.

Transcripts: An official copy of transcripts will be mailed to the permanent address listed by students on their online application. One more transcript may be sent to the student's home institution at no cost. Additional transcripts may be ordered at any time through the [National Student Clearinghouse](#).

PREREQUISITES

There are no practical prerequisites for participating in our excavation, as the program is designed to provide hands-on, experiential learning also for complete beginners. Basic knowledge of stratigraphy and formation processes would be useful. However, participants must be aware that fieldwork involves substantial physical labor and being outdoors, so participants should be prepared for varied environmental conditions (heat, cold, wind, storm) and a different situation compared to typical university settings. Students should expect to get **dirty, sweaty, and very tired** while working under the sun. Working hours are strict and need to be respected. Enthusiasm, collaborative attitude, and a clear understanding that **archaeology entails substantial effort**—standing, kneeling, digging, and using shovels, picks, or a trowel—are essential. **Patience, discipline, resilience, flexibility,** and meticulous attention to detail are crucial for success in this field. Knowledge of Italian is considered an asset (but is not compulsory), because much of the published literature and prior documentation are in Italian. However, since 2023 the excavation is hosting international students with a wide background and thus English has become a favorite language for communication.

COURSE OBJECTIVES

The primary pedagogic objectives for the Bostel di Rotzo field school are to immerse students in hands-on archaeological research, deepen their understanding of Italian protohistory (Bronze and Iron Age), and equip them with a broad set of skills and knowledge applicable to various professional fields.

1. Understanding of Archaeological Research: Students will be taught the fundamental principles of archaeology, including stratigraphy, formation processes, and the significance of material culture. This knowledge will be gained through direct involvement in excavations and artifact analysis.

2. Practical Application of Field Techniques: Students will learn to use modern archaeological tools and techniques, such as UAV surveys, total station recording, and 3D modeling. They will gain practical experience in setting up and conducting excavations, recording findings, and maintaining accurate field notes.

3. Recognizing the relevance of Italian Protohistory: Students will gain introductory knowledge to the archaeology of central and northern Italy in the 2nd and 1st millennium BCE, which will clarify the relevance of this area in the long-distance trade networks connecting central Europe with the Mediterranean and Aegean world.

LEARNING OUTCOMES

TECHNICAL AND FIELD SKILLS

By the conclusion of the field school, students can expect to have acquired the following methods, techniques, competencies, skills, and concepts:

1. Archaeological Methods and Techniques:

- Proficiency in excavation techniques, including stratigraphic excavation, use of Munsell soil color chart, triangle of texture, writing of context sheets.
- Skills in artifact recognition, cleaning, documentation, and cataloging.
- Skills in using stereoscopic microscopes for observing archaeological materials and recognizing production technologies or use-wear traces.

2. Competencies in Digital Archaeology:

- Experience with topographic surveying and digital recording using UAVs, total stations, and mobile GIS.
- Ability to use markers and acquire images for SfM-derived 3D models and orthophotos.

4. Critical Thinking and Problem-Solving:

- Enhanced skills in critical thinking and problem-solving through hands-on fieldwork.
- Understanding of the importance of cultural heritage and the role of archaeology in preserving it.

5. Flexibility:

- Awareness that archaeological fieldwork is subject to unforeseen challenges, including weather conditions, time constraints, delays, unexpected discoveries, and equipment issues.
- Development of flexibility as fundamental competency for responding effectively to changing circumstances and maintaining research continuity.

DURABLE SKILLS

Given that many undergraduate students may not pursue careers in academia, the field school emphasizes skills and competencies that are transferable to various professional fields. These include:

1. **Team Working:** Participating in the Bostel di Rotzo field school fosters strong team-working skills. Students will collaborate closely with peers, experts, and faculty engaging in activities that require clear communication, coordination, and mutual support. Working as part of a multidisciplinary research team, they will learn to divide tasks, share responsibilities, ask for help, and support each other in achieving common goals, both in the field and in the mission house. This experience will enhance their ability to work effectively in team settings, a critical skill in any professional field.
2. **Adaptability and Resilience:** Fieldwork in archaeology, especially in a challenging environment like the pre-Alps, requires a high degree of physical and mental adaptability and resilience. Students will encounter variable weather conditions, rugged terrain, and physically demanding tasks. Additionally, they will cohabit with other participants for 3 weeks, which implies a continuous exercise of building and overcoming personal boundaries. Students will learn to adapt to these conditions, maintain productivity, and handle unexpected challenges. This experience builds resilience, teaching students to remain focused and resourceful under pressure, an invaluable trait in any career.
3. **Internationalization:** The Bostel di Rotzo excavation offers an opportunity for students to gain international experience. Working in Italy, they will engage with local cultures, learn to navigate language barriers, and understand diverse perspectives. They will work side by side with colleagues from different Universities, benefiting from a varied and inclusive working atmosphere. This exposure to international contexts enhances students' global awareness and prepares them for careers in an increasingly interconnected world.
4. **Interdisciplinary communication:** The field school emphasizes an interdisciplinary approach, integrating methods and theories from archaeology, digital technology, geosciences, history, and heritage management. Students will use advanced technological tools such as UAVs for aerial surveys, total stations for topographic recording, and collect images for 3D modeling. This interdisciplinary training equips students with a versatile skill set, making them valuable in various fields beyond archaeology, such as digital humanities, cultural resource management,

and public history. The ability to communicate and collaborate with people with different disciplinary backgrounds, will provide an asset for many job applications.

ASSESSMENT

To provide clarity on how student work will be assessed, the following grading rubric outlines the criteria for evaluating participation in field work, assigned readings, and materials covered in lectures. Each component is weighted to reflect the importance of both practical engagement and academic understanding.

Participation and Engagement in Fieldwork Activities (40%)

Criteria	Excellent (90-100%)	Good (80-89%)	Satisfactory (70-79%)	Needs Improvement (60-69%)	Unsatisfactory (<60%)
Engagement & Effort	Consistently engaged, shows exceptional effort and initiative, goes beyond assigned tasks.	Frequently engaged, shows strong effort, completes tasks reliably.	Generally engaged, shows adequate effort, completes tasks.	Inconsistently engaged, shows minimal effort, requires reminders to complete tasks.	Rarely engaged, shows little effort, often fails to complete tasks.
Teamwork & Collaboration	Always collaborates effectively, supports peers, successfully responds to assigned tasks, and demonstrates leadership.	Collaborates well, supports peers, responds well to assigned tasks, sometimes demonstrates leadership.	Collaborates adequately, generally supports peers, and responds to assigned tasks.	Struggles to collaborate, rarely supports peers, partially responds to assigned tasks.	Does not collaborate, hinders team progress, and responds hesitantly to assigned tasks.
Skill Development	Demonstrates excellent progress and proficiency in field skills.	Shows good progress and proficiency in field skills.	Demonstrates satisfactory progress and some proficiency in field skills.	Shows minimal progress, lacks proficiency in field skills.	Shows no progress, lacks necessary field skills.
Adherence to Protocols	Consistently follows all protocols and safety guidelines.	Follows protocols and safety guidelines	Generally follows protocols and safety guidelines.	Occasionally disregards protocols and safety guidelines.	Frequently disregards protocols and safety guidelines.

		with few reminders.			
--	--	---------------------	--	--	--

Assigned Readings and Materials Covered in Lessons (25%)

Criteria	Excellent (90-100%)	Good (80-89%)	Satisfactory (70-79%)	Needs Improvement (60-69%)	Unsatisfactory (<60%)
Preparation	Consistently completes readings on time, deeply understands material.	Completes readings on time, shows good understanding of material.	Generally completes readings, shows satisfactory understanding.	Inconsistently completes readings, shows limited understanding.	Rarely completes readings, shows poor understanding.
Discussion Participation	Actively participates in discussions, provides insightful contributions.	Frequently participates in discussions, provides relevant contributions.	Occasionally participates in discussions, providing some relevant contributions.	Rarely participates in discussions, contributions are limited.	Does not participate in discussions, contributions are irrelevant or absent.
Application of Concepts	Consistently applies concepts from readings to field work and discussions effectively.	Frequently applies concepts from readings to field work and discussions.	Occasionally applies concepts from readings to field work and discussions.	Rarely applies concepts from readings to field work and discussions.	Does not apply concepts from readings to field work and discussions.

Criteria	Excellent (90-100%)	Good (80-89%)	Satisfactory (70-79%)	Needs Improvement (60-69%)	Unsatisfactory (<60%)
Attendance	Attends all lectures, arrives on time, fully participates.	Attends most lectures, usually on time, generally participates.	Attends lectures with occasional absences, participation is satisfactory.	Frequently absent or late, rarely participates.	Rarely attends lectures, does not participate.
Engagement with Material	Shows excellent engagement with lecture material, asks questions, and	Shows good engagement with lecture material, occasionally asks questions, and	Shows satisfactory engagement with lecture material, sometimes asks questions.	Shows limited engagement with lecture material, rarely asks questions.	Shows no engagement with lecture material, does not ask questions.

	contributes to discussions.	contributes to discussions.			
Understanding of Material	Demonstrates a deep understanding of lecture content, and integrates into field work.	Demonstrates a good understanding of lecture content, generally integrates into field work.	Demonstrates a satisfactory understanding of lecture content, occasionally integrating into field work.	Demonstrates limited understanding of lecture content, rarely integrates into field work.	Demonstrates no understanding of lecture content, does not integrate into field work.

Written Assignment (15%)

Criteria	Excellent (90-100%)	Good (80-89%)	Satisfactory (70-79%)	Needs Improvement (60-69%)	Unsatisfactory (<60%)
Reflection Journal	Entries are detailed, insightful, well-illustrated, and consistently connect theory with practice.	Entries are detailed, illustrated, and generally connect theory with practice.	Entries are adequate with occasional connections between theory and practice.	Entries are brief, with few connections between theory and practice.	Entries are incomplete or lack depth, with no connections between theory and practice.

Practical Exercises (20%)

Criteria	Excellent (90-100%)	Good (80-89%)	Satisfactory (70-79%)	Needs Improvement (60-69%)	Unsatisfactory (<60%)
Fieldwork Skills Assessment	Demonstrates exceptional proficiency in fieldwork skills, completing tasks with high accuracy and efficiency.	Demonstrates strong proficiency in fieldwork skills, completing tasks accurately and efficiently.	Demonstrates adequate proficiency in fieldwork skills, completing tasks satisfactorily.	Demonstrates minimal proficiency in fieldwork skills, completing tasks with difficulty.	Lacks proficiency in fieldwork skills, unable to complete tasks accurately or efficiently.

Overall Grade Calculation

- Participation and Engagement in Field Work Activities: 40%
- Assigned Readings and Materials Covered in Lessons and Invited Lectures: 25%
- Written assignment: 15%

- Practical Exercises: 20%

COURSE SCHEDULE

All IFR field schools begin with an orientation that addresses local and program protocols concerning student behavior, appropriate attire, local practices and sensibilities that may be unfamiliar, potential fauna and flora hazards, IFR harassment and discrimination policies, and the student Code of Conduct.

Please note that the schedule outlined in this syllabus can be disrupted by unforeseen circumstances, including weather, revisions by local permitting agencies, or conditions onsite. While this schedule represents the intentions of the program, adaptability is an intrinsic part of all field research, and necessary alterations to the schedule may happen at any time.

WEEK 0: Online Introduction (June 1, 2, 4, 5, and 8, 2026, all times in Ester Daylight Time - EDT)

Monday (June 1)

9:30-11 am: LECTURE 1 – Introduction to Italian Protohistory, and the Pile-dwellings Culture by Cinzia Bettineschi

11.30 am-1 pm: LECTURE2 – The Terramare culture of the Italian Bronze Age by Cinzia Bettineschi

2-5 pm: independent reading cfr. reading list on TIP

Tuesday (June 2)

9:30-11 am: LECTURE 1 – Iron Age Italy: an Introduction to the Pre-Roman Peninsula

11.30 am-1 pm: LECTURE2 – The Villanovian culture and the Etruscan of the Po plain by Cinzia Bettineschi

2-5 pm: independent reading cfr. reading list on TIP

Thursday (June 4)

9:30-11 am: LECTURE 1 – Introduction to Excavation, Stratigraphy, and Formation Processes: part 1 by Luigi Magnini

11.30 am-1 pm: LECTURE2 – Introduction to Excavation, Stratigraphy, and Formation Processes: part 2 by Luigi Magnini

2-5 pm: independent reading cfr. reading list on TIP

Friday (June 5)

9:30-11 am: LECTURE 1 – Ancient Veneti by Cinzia Bettineschi

11.30 am-1 pm: LECTURE2 – The Raeti and Bostel intro by Cinzia Bettineschi

2-5 pm: independent reading cfr. reading list on TIP

Monday (June 8)

9:30-11 am: LECTURE 1 – GIS and digital methods for Fieldwork documentation by Luigi Magnini

11.30 am-1 pm: LECTURE2 – The Archaeology of the First World War by Luigi Magnini

2-5 pm: independent reading cfr. reading list on TIP

Date	Time	Activity
June 21 st (Sunday)	afternoon	Arrival in Vicenza, transfer to Rotzo, and room assignment
June 22 nd (Monday)	Morning Afternoon	Preliminary briefing on site security and opening of the excavation Guided tour of the site and the Museum
June 23 rd (Tuesday)	All day	Fieldwork (or lab work according to the weather conditions)
June 24 th (Wednesday)	All day	Fieldwork (or lab work according to the weather conditions)
June 25 th (Thursday)	All day Evening	Fieldwork (or lab work according to the weather conditions) Evening Lecture
June 26 th (Friday)	All day	Fieldwork (or lab work according to the weather conditions)
June 27 th (Saturday)	Morning Afternoon	Fieldwork (or lab work according to the weather conditions) Cleaning of mission house + free time
June 28 th (Sunday)	All day	Free time
June 29 th (Monday)	All day	Fieldwork (or lab work according to the weather conditions)
June 30 th (Tuesday)	All day	Fieldwork (or lab work according to the weather conditions)
July 1 st (Wednesday)	All day	Visit to Verona, Venice, or Padova+Este
July 2 st (Thursday)	All day Evening	Fieldwork (or lab work according to the weather conditions) Evening Lecture
July 3 rd (Friday)	All day	Fieldwork (or lab work according to the weather conditions)
July 4 rd (Saturday)	All day	Fieldwork (or lab work according to the weather conditions) Cleaning of mission house + free time
July 5 th (Sunday)	All day	Free time
July 6 th (Monday)	All day	Fieldwork (or lab work according to the weather conditions)
July 7 th (Tuesday)	All day	Fieldwork (or lab work according to the weather conditions)

July 8 th (Wednesday)	All day	Visit to Millegrobbe (Trento province) and Asiago
July 9 th (Thursday)	All day Evening	Fieldwork (or lab work according to the weather conditions) Evening Lecture
July 10 th (Friday)	All day	Fieldwork (or lab work according to the weather conditions)
July 11 th (Saturday)	Morning Afternoon Evening	Final remarks of the field activities Cleaning of the facilities and packing Closing dinner
July 12 th (Sunday)	All day	Transfer to Padova

REQUIRED READINGS

PDF files of all mandatory readings will be provided to enrolled students. Program participants are expected to be prepared to engage in discussions led by facilitators, all of whom will be looking for compelling evidence that students have read and thought about the assigned readings prior to the fieldwork start.
