Teacher example

Coronavirus has a lot of Symptoms. Some of these mild symptoms are coughing and a high temperature. Just like a common cold, you might also experience a sore throat, sneezing and a runny nose. Shortness of breath has been one of the worst covid-19 symptoms, leaving people feeling very weak. Interestingly, a temporary loss of smell has been reported as a symptom too.

Student examples

Rashaan

There are lots of symptoms and some of them are coughing and sneezing and so on. A cough can be one sign but it doesn't mean you have covid 19. A high temperature (at least 38°C). Shortness of breath is a big sign and you have to go to the doctors to make sure you're fine. a sore throat is when your throat is dry and when you eat it burns. Sneezing and a runny nose means you have a cold and it means Do not go outside temporarily because of the loss of smell. I am very bad because.

Jamie-Lee

CoronaVirus is caused by many things such as coughing, Sneezing. You have to pay attention to many of the people you are surrounded by. Try and make sure that you are Social distancing between your family or others. People are breaking rules and not making it easy for others that are using their initiative to stay isolated.

There are multiple symptoms that could be outrageous to you and maybe you have experienced too. Such as shortness of breath, sneezing and a runny nose.

Skylah

Covid-19 is not good because it is going everywhere. Because people keep going outside because they think the corona is finished and the coronavirus is not good. Because if the people get the corona and if they get sicker and sicker they will die because they didn't listen to the rule that the new is on the tv. The other thing people don't like about the corona is that they don't get to see their other family because the corona keeps on killing people. The other thing I don't like about the corona is that it is killing mostly everybody because they keep on going outside when they are not supposed to outside because they will get the coronavirus.

Rasheed

There are quite a few symptoms when it comes to Covid-19. Covid-19 is an outbreak that has spread across the entire world. Because of this virus, people have been

forced to stay in lockdown and have to abide by social distancing rules. Some of these symptoms are a dry cough or a sore throat.

It also causes a lot of sneezing, a runny nose and a temporary loss of smell. It also causes a high temperature which causes the body to overheat. But one of the worst symptoms is a shortness of breath. People like us need to breathe. Without air we will not be able to live. Also the amount of air people take in is really small when they have covid-19. Some people need machines to breathe for them.

Covid-19 has also had a large impact on our community. It has caused a lot of people to fear one another. It has also caused people to fight over stupid things such as toilet paper. It has caused people to panic. I would say covid-19 is one of the worst pandemics ever. Beside the black death. Covid-19 has made a lot of people go into isolation.

Incubation period: The time between when an individual is first exposed to covid-19 and the appearance of the symptoms. No one knows when a person's level of contagion before symptoms arise is not known.
