

Meta Title: MoonBull (\$MOBU) Presale Dominates the New Presale Coins List

Meta Description: Discover why MoonBull (\$MOBU) leads 2025's new presale coins with explosive ROI potential, unique tokenomics, and community-first rewards.

Smart Money's October 2025 Shortlist: 5 Coins and a New Presale Coin Ready to Rocket

[New presale coins](#) are roaring into 2025 with unstoppable energy, giving investors the kind of early entry opportunities that can turn small plays into moon-bound wins. This time, the spotlight shines on MoonBull (\$MOBU), BullZilla (\$BZIL), and Stellar (\$XLM), three tokens showing what conviction and timing can achieve in the meme and utility sectors. Each carries its own appeal, but one live presale is generating serious noise across crypto groups and X threads.

The MoonBull presale is now live at Stage 4, where the stage-based pricing rewards those who act fast. The earlier buyers have already bagged over 106% ROI, while projections from Stage 4 to listing show potential gains exceeding 11,800%. With the next 27.40% price jump on the horizon, hesitation is costly. Every minute delay means a higher entry price and a smaller moonshot.

1. MoonBull (\$MOBU): The Live Presale That's Turning Heads

[MoonBull \(\\$MOBU\)](#) stands out among new presale coins for rewarding both engagement and loyalty through its unique referral system. Each referral grants both users a 15% token bonus instantly on-chain, while monthly leaderboards offer USDC rewards up to 10% for top referrers. Backed by 8.05 billion \$MOBU, this mechanism fuels organic expansion with full transparency.

Mobunomics gives MoonBull its backbone, prioritizing sustainability over speculation. With a total supply of 73.2 billion \$MOBU, half is dedicated to presale, 20% to staking with 95% APY, and 10% locked in liquidity for two years, ensuring long-term stability.

Every transaction contributes to growth: 2% reflections to holders, 2% to liquidity, and 1% burn. This self-reinforcing cycle strengthens the ecosystem and rewards conviction, making MoonBull one of the most balanced and promising new presale coins to buy early.

Presale Snapshot: Stage 4 Is Heating Up

MoonBull's presale metrics tell the story. With the current price at \$0.00005168, over \$250K raised, and 900+ token holders, the project's traction is undeniable. Early-stage investors who joined at Stage 1 are already up 106%, while those entering now still stand to gain over 11,800% ROI at listing (\$0.00616).

If an investor places \$5,000 at Stage 4, the projected value at listing could soar past \$590,000, assuming targets hold. With the next 27.40% price increase around the corner, MoonBull is a textbook case of why early conviction counts in presales. Among the top new presale coins launching 2025, few carry this blend of math, community, and clarity.

2. Stellar (\$XLM): The Veteran With Fresh Potential

Stellar (\$XLM) remains one of the most stable altcoins in the ecosystem. Its network facilitates seamless cross-border payments and continues to attract fintech collaborations worldwide. While not part of the new presale coins category, Stellar's ongoing development ensures its relevance in the 2025 market narrative.

XLM's open-source model supports scalable token issuance, which positions it as a trusted choice for institutional-grade projects. With enhanced liquidity and real-world adoption, Stellar maintains its position among assets that complement high-growth presales like MoonBull rather than compete with them.

3. BullZilla (\$BZIL): The Meme Titan With a Live Presale

The beastly [BullZilla \(\\$BZIL\)](#) has charged into the scene as one of the most creative new presale coins with high upside. Built on Ethereum, this lore-driven meme coin unfolds across 24 cinematic "chapters," creating a continuous narrative of hype.

The BullZilla presale is currently active, following its "Mutation Mechanism" where the token price automatically increases with every \$100K raised or every 48 hours. Featuring 70% APY staking and live "Roar Burns" that shrink supply, it gives community members reasons to stay engaged long-term. It's one of the few projects blending meme culture with actual mechanics, making it one of the best new presale coins before listing in the meme niche.

4. La Culex (\$CULEX): The Upcoming Meme Swarm

The [La Culex](#) meme coin is still in stealth development, yet it's already creating buzz among meme traders. Unlike most fly-by-night tokens, La Culex aims to combine humor with DeFi usability, forming a unique bridge between entertainment and staking incentives.

Expected to roll out its presale in early 2025, this project could easily join the ranks of top new presale coins launching 2025. The developers are focusing on low transaction costs, scalable tokenomics, and a deflationary system tied to community activity. When it finally launches, La Culex might just sting the competition.

5. Hedera (\$HBAR): The Enterprise Giant Evolving Fast

Hedera (\$HBAR) continues to attract global enterprises with its carbon-negative public ledger and near-instant finality. Although not part of the new presale coins trend, HBAR's technology supports next-generation dApps and real-world asset tokenization.

Analysts have cited Hedera's rapid integration into payment infrastructures as a major catalyst for its steady growth. Its partnerships and proven transaction efficiency keep it relevant alongside emerging projects aiming for long-term scalability.

6. World Liberty Financial (\$WLFI): The DeFi Dark Horse

World Liberty Financial is quickly emerging as a decentralized finance contender with its unique liquidity incentive model. While it's not among the new presale coins to buy early, its focus on autonomy and yield farming innovation keeps it in traders' sightlines.

By introducing algorithmic yield adjustment and dynamic staking rates, WLFI seeks to offer flexible opportunities within a secure ecosystem. It's carving a niche that bridges DeFi accessibility with sustainable token economics, making it one to watch post-2025.

7. Aster (\$ASTER): The Crypto Powerhouse

Aster is a multi-chain network designed to enable dApps to operate across multiple blockchains seamlessly. Not part of the new presale crypto coins, Aster still finds relevance for early investors looking for infrastructure-level exposure.

Its cross-chain capabilities and low transaction fees give developers the tools to build decentralized products with ease. As Web3 expands, Aster's interoperability puts it in line with high-potential altcoins shaping future blockchain ecosystems.

Conclusion

Based on the latest research, the most talked-about [new presale coin](#) right now is MoonBull (\$MOBU). While BullZilla (\$BZIL), Stellar (\$XLM), and the upcoming La Culex (\$CULEX) are building anticipation, MoonBull stands alone with its live Stage 4 presale and fair, community-first structure. Its 23-stage pricing model, powerful referral rewards, and sustainable Mobunomics make it one of the top new cryptos of 2025 for early believers.

With the presale live and prices set to surge another 27.40%, MoonBull is giving everyday traders access to early-stage upside that's usually reserved for insiders. The opportunity is clear, each stage moves higher, and the next one is approaching fast.

MoonBull isn't just another meme; it's momentum made real. Join the live presale now before the next price jump leaves you behind.
