

## Bankless Radicle Drips Ideation

**Purpose:** This doc will lay out potential use cases for Radicle Drips at the Bankless DAO. This is not a proposal, but a document designed to start and progress the conversation around BanklessDAO using the Radicle Drip Protocol

### **What are Radicle Drips?**

For a full overview, the website is [here](#) and the docs [here](#).

Radicle Drips at a glance

- A drip is a recurring funding stream to a creator/project on a monthly basis
- Drips can be a monthly flat rate or a % of incoming drips
- Any eth user / community can create a drip to fund their favorite projects
  - Gnosis Safe Wallets are supported
- Creators can set monthly funding goals, and subscription prices
  - Monthly subs are represented by NFTs
  - Creators can link benefits to subscription NFTs
- Drips currently support DAI, but ERC-20 tokens are coming very soon.

### **Internal DAO Uses**

If the DAO decides to use drips internally we will likely need to consider guilds or project groups managing their own multisig wallets. The DAO at large could have revocation permissions on these wallets. This might be subDAO territory.

- Revenue projects can use drips to give back to the DAO
- Guilds can drip to other guilds for collaboration projects
- Guilds/Projects can use drips to drip base salaries to team members, while still using coordinape or other tools
- Member services, currently there is a DAO yoga class, we can take similar ideas and combine them into a member package or have standalone services for DAO members

### **External DAO Uses**

- Revenue stream for membership restricted content
- Revenue stream for consult services
- Philanthropic donations
- Subscription for content placement on the websites
