Technology has changed a lot during my lifetime

I was born in 2005 and a lot has changed from then. When I was little I remember seeing these flip phones with tiny screens and how excited everyone was. As I got older the world keep changing in 2006 the world got a upgrade to the wii U ,but that wasn't the end of technology it was the beginning. The technology world keep changing and it's still changing to this day. In kindergarten they taught us on whiteboard and we used paper and pencil. Now we still use paper and pencil ,but now they teach us on smartboard and chromebooks. Today the world has computers, laptops, tablets, phones,and Apple watches and the technology keeps going.

Well done. Nice work.

Prokopis

Technology has changed a lot during my lifetime .

I was born in February 04th ,2003 and back then, people didn't have smartphones and smart TVs. People had those big and large phones with all of those small-tiny screens. ~~and if you were lucky you could have a 2 megapixel camera.~~

Mikkel Zinder

Nowadays I use technology everyday without even noticing how many hours I spend searching ~~on the web or watching videos on YouTube to entertain myself.~~

On the web or watching videos on Youtube for entertainment.

Technology has improved a lot over the past years, and it's going to keep improving in the upcoming years.
