AI-POWERED DISCOVERY
 IPO Genie uses AI to analyze and surface early-stage investment opportunities.

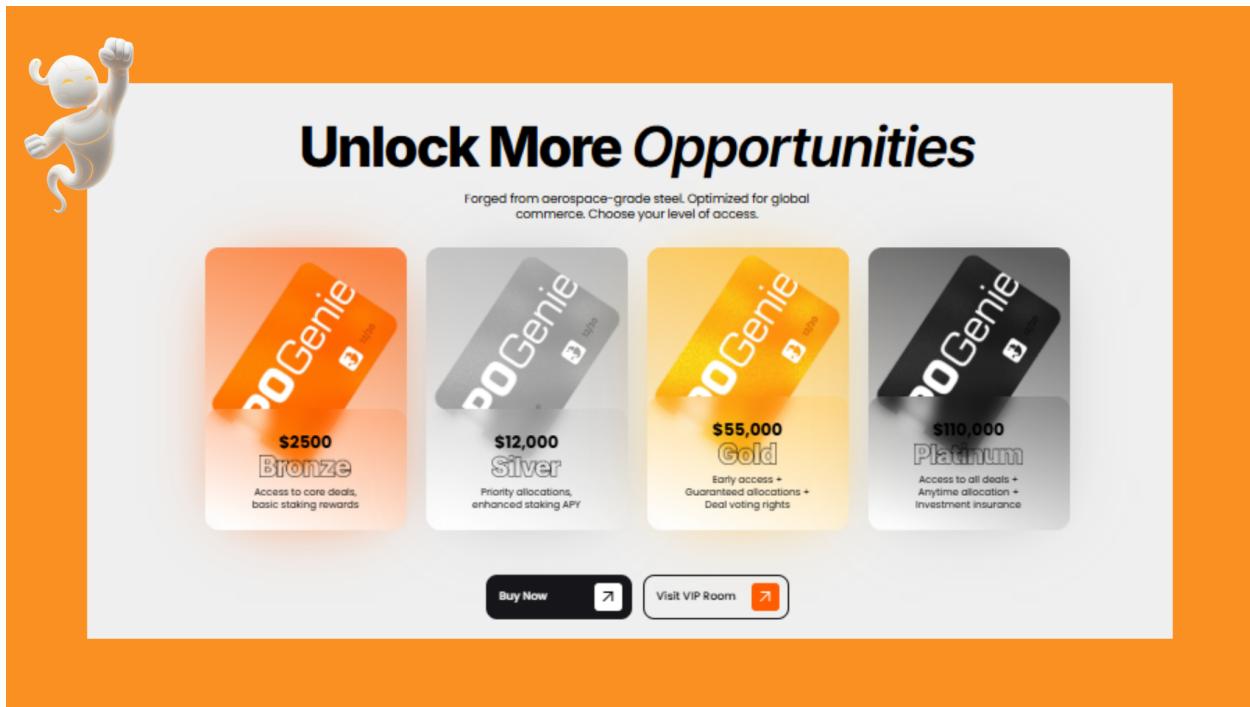

IPO Genie's pitch isn't "**AI because it's trendy.**" IPO Genie positions itself as an **AI-powered discovery and access platform** focused on early-stage and private-market opportunities. At the center of the platform are **Sentient Signal Agents**, AI systems designed to

How IPO Genie works (3-stack mechanism investors check)

- 1. **Entry + tier access:** Buy \$IPO, then hold or stake to qualify for tiered participation (**Bronze** → **Platinum**) and access benefits described in project materials.

- 2. **Deal flow + verification:** Curated private-market opportunities are screened and checked before being surfaced. It aims to separate “access” from random listings.
- 3. **Tokenized participation + exit pathways:** Participation is tokenized, with potential liquidity routes designed to reduce “locked for years” dynamics; exits still depend on rules, availability, and market conditions.

This is why IPO Genie isn’t being pitched as a meme narrative; it’s being pitched as infrastructure with a defined flow.
