

Hi, this tutorial will show you how to get any image you want in Taming.io as your weapon. Let's start.

First you need to get this chrome extension:

<https://chrome.google.com/webstore/detail/custom-redirects/kekdllcidamgebonidegjekidhdihdli>

Dont worry I am not trying to scam you :)

Then follow what i do

In put the weapon url and then the picture you want to swap it with

<https://taming.io/img/item/stone-sword.png>

I am using the stone sword as an example.

Then load up Taming.io and you will have the image you wanted to replace

Sometimes the image doesn't have the right dimensions or right orientation, but just play around until you find something that works for you!

Sometimes the background doesnt get removed, but keep trying until you find a image that works for you :)

Thanks for watching and i hope you learned something cool from this video! SEE YOU NEXT TIME! PS the google docs link will be in the description.
