MathSpring for Teachers

The Teacher tools of MathSpring allow you to do all the management of the MathSpring software so that it can be used with your students. You can set up classes, student accounts, manage the content that students will see, and see detailed reports about your students' performance..

> **NOTE:** A teacher can launch the Teacher Tools from Mathspring.org, from the same place where a student logs in.

There are navigation buttons at the bottom of each page for you to move forward and backward within the course.
