

ApexRunner - Privacy Policy

Last updated: June 21, 2026

This Privacy Policy describes how ApexRunner ("the Extension") handles your data.

1. Data Collection and Usage ApexRunner is designed to execute Anonymous Apex scripts directly on your active Salesforce environment. To achieve this single purpose, the Extension accesses:

Browser Cookies: Specifically, the Salesforce session cookie (sid). This is required to securely authenticate API requests to your Salesforce instance.

Active Tab URL: To determine which Salesforce environment (e.g., Production or Sandbox) is currently active on your screen.

2. Data Storage Any data you generate within the Extension, including your saved Apex scripts, dynamic input configurations, and UI preferences, is stored strictly locally within your browser using Chrome's local storage API.

3. Data Sharing and Transmission The Extension does not collect, transmit, or share your data, scripts, or session cookies with the developer, third-party analytics services, or any external servers. The only external transmission occurs directly between your browser and the Salesforce servers to execute your requested scripts.

4. Limited Use The use of information received from Chrome APIs adheres strictly to the Chrome Web Store User Data Policy, including the Limited Use requirements. Your data is not sold, transferred, or used for advertising purposes under any circumstances.

5. Contact If you have any questions regarding this Privacy Policy, please contact the developer via the Chrome Web Store support tab.
