

How to start farming Cronos zkEVM:

+first of all head over metamask and click on add network manually.

+after that fill up the form.

A screenshot of the Metamask mobile app interface showing the 'Add a network' form. The form has several fields: 'Network name' with the value 'Cronos zkEVM Mainnet', 'New RPC URL' with the value 'https://mainnet.zkevm.cronos.org/', 'Chain ID' with the value '388', 'Currency symbol' with the value 'zkCRO', and 'Block explorer URL (Optional)' with the value 'https://explorer.zkevm.cronos.org/'. At the bottom, there are two buttons: 'Cancel' and 'Save'.

Name:Cronos zkEVM mainnet.

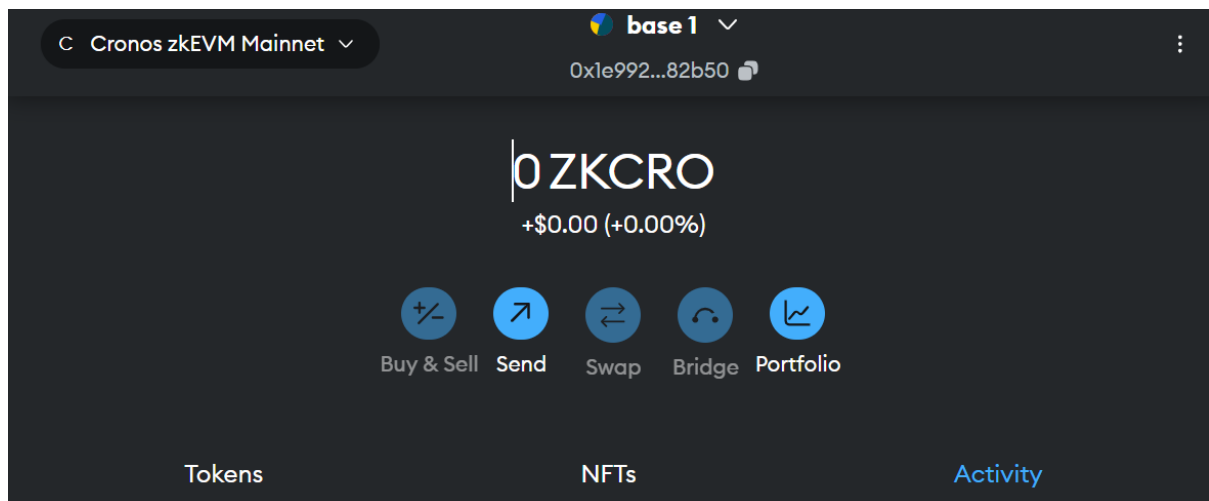

New RPC URL:<https://mainnet.zkevm.cronos.org/>

Chain ID:388.

Symbol:zkCRO.

Block explorer URL: <https://explorer.zkevm.cronos.org/>

+click save and now you're on Cronos zkEVM chain.

NOTE:

Before we start I want you to note this type of farm is a volume's game. Don't spray your funds to different wallet addresses and farm instead just deposit your funds in one address because slippage is quite high for swaps so volume will help us get more for points allocations.

I'd recommend +200\$.

Let's start farming:

+To earn points make sure you go to <https://zkevm.cronos.org/missions>.

Connect your socials and your wallet and complete the missions.

Make sure to check frequently because there'll be more missions to complete.

+ the team also partnered up with trailblazing ecosystem partners to interact with in order to earn more points as well as you can see your rank via <https://zkevm.cronos.org/leaderboard>

+In the following steps i'll provide a few steps you can follow for now as I'll be updating this if I find anything more interesting.

+Gas fees are paid in \$zkCRO.

STEP 1: get your money on chain using cronos zkEVM bridge.

- + First thing you should do is buy CRO on ETH mainnet.
- + After that you head over to <https://zkevm.cronos.org/bridge> and bridge.
- + You'll receive zkCRO in cronos zkEVM mainnet.

STEP 2:lend and borrow in amply finance.

- + Go to <https://amply.finance/markets/> and try to push as many txns as you can in there.
- + For example if you got 400\$ to farm with take half of it and supply it in any pool you want to. I'd assume you guys will supply zkCRO so that's a good start.
- + Why you need volume? Because again as i said in the **NOTE** Above slippage is very high for swaps so volume will help you earn more points. The more you got the better.

STEP 3: provide liquidity in H2 finance.

- + Go to <https://h2.finance/swap> Swap some zkCRO to CRO or any ticker you want.
- + Go to pools and choose zkCRO/CRO pool and provide liquidity.
- + Keep it there for couple days remove liquidity and swap everything back to zkCRO.

This is it for the guide. I'll update it if i find anything more intreseting to add i didn't add dexes with swaps only since you might face the slippage issue however if it's still there in H2 finance just push as many txns as possible in amply finance.

If you want to you can bridge and debridge using the native bridge or XY finance and rhino finance.

NOTE: don't forget to tell me about your experience while you're doing the third task in OG chat.
