[Overview](#)

[More details](#)

[Tips](#)

[Example](#)

Objectives

- Use the DOM to change HTML CSS styles.
- Use DOM and CSS to hide / show HTML elements.
- Use HTML5 multimedia

References

- [JS & CSS](#)
- [CSS Display & visibility](#)
- [HTML5 multimedia](#)

Overview

- Create a profile page that the user can edit.
- Features:
 - Account info
 - Preferences
 - Personal info

More details

- You can implement this in a single page.
- When you click **Save** in the acct. info section:
 - disable the username and password inputs
 - hide the save button and show an edit button
- When you click **Save** in the pref. section:
 - Change the page styles (CSS)

Tips

- For color and range input types, see [HTML Input Types](#) (scroll ~½ way down the page)
- For profile pic loading, see [File Input notes](#).
- **Extension:**
 - Allow the user to change [CSS image filters](#) with scrollbars

Example

- Note, the save and edit button should NOT be showing at the same time, as they are in the pref section below
