

Where is the alarm definition

Jing, mqjing@gmail.com

Choose your vm

[Manage] -> [Alarm Definition]

The screenshot shows the VMware vSphere Web Client interface. The left sidebar displays a tree view of the environment, including 'localhost', 'mydatacenter', 'mycluster', and several virtual machines. The 'Virtual machine CPU usage' alarm is highlighted in the list. The main panel shows the 'Manage' tab for this alarm, with the 'Alarm Definitions' sub-tab selected. The 'Triggers' section is expanded, showing the alarm's trigger states.
