

I can do recombination between application modes for DL and advanced in DL research

1. Super-resolution
 - a. For Audio (make all calls crystal clear)
 - i. Music performances (ex, re-make old performances)
 - b. For Images (obvious & easy paid web app)
 - c. For Video
2. Voice Synthesis
 - a. General audio stream conversion w/ voice replacement
 - b. Give your voice to the system, let it say anything with it
 - c. Give it arbitrary text, and have a beautiful voice speak it
 - d. Morgan freeman voice for everything
3. Real time voice modification
 - a. For giving speeches / talks
 - b. For youtube videos
 - c. For artists singing
 - i. (Be able to take videos of you singing anything well)
4. Data center optimization
 - a. Google saved 50mil / year with this, be the one to do this for every major tech company
5. Image Recommendation Engine
6. Computational Memetics
 - a. Create models for predicting / controlling the spread of information across every social network
7. Energy savings in computers (by controlling which programs run when, where, etc.)
 - a. See device placement
8. Next generation operating system
 - a. Integrate ML into every tool up and down the stack, sharing data that lets every user action happen effortlessly
 - b. Full speech integration
9. Emotional layer over the internet
 - a. Control your emotional experience
