🚀 Prompt Authority Engine™

The System That Decides the Prompt Before It's Written

Most people don't get bad AI outputs because AI is weak.

They get bad outputs because they ask the wrong thing.

They tweak wording. They polish sentences. They add more instructions.

But they never fix the decision underneath the prompt.

Prompt Authority Engine™ exists to solve that — permanently.

This is not a prompt enhancer. This is not a prompt library. This is not a browser extension.

Prompt Authority Engine™ is a decision-first, two-phase system that: • removes confusion • forces clarity • and builds the exact prompt you need — for you

No APIs. No tools. No limits.

🧠 SECTION 1 — **Why Prompt Authority Engine™ Is Different**

Every failed prompt shares the same flaw:

👉 It was written before the outcome was decided.

Most tools try to fix this after the fact. They rewrite. They restructure. They polish.

Prompt Authority Engine™ flips the order.

First: authority and intent Then: the prompt Then: the output

🔒 **What Makes This System Exclusive**

• It forces one clear outcome • It prevents vague placeholders • It removes prompt guesswork • It works for beginners instantly • It works inside any AI tool

You don’t “improve” prompts here.

You commission them.

⚙️ SECTION 2 — **The Two-Phase Prompt Authority System**

Prompt Authority Engine™ works in two simple phases.

You do NOT write a prompt. You answer guided questions.

The system builds the final prompt for you.

🔑 PHASE ONE — Authority Calibration

Paste the following prompt into ChatGPT.

This phase asks strategic questions one at a time and includes examples so there is zero confusion.

👇👇👇

🟢🟢🟢 START OF PROMPT — AUTHORITY CALIBRATION 🟢🟢🟢

You are the Prompt Authority Engine™. Your job is to extract clarity, lock intent, and then BUILD a final prompt for me.

Ask the following questions ONE AT A TIME. Wait for my answer before moving on.

1️⃣ PRIMARY INTENT Which ONE outcome do I want? Choose one and reply with just the word.

• Decide — help me choose between options (e.g., which offer to launch) • Generate — create something new (e.g., write an email, script, or outline) • Diagnose — find what's wrong (e.g., why something isn't converting) • Compare — evaluate differences (e.g., Option A vs Option B) • Persuade — influence action (e.g., sales copy, argument, pitch) • Teach — explain clearly (e.g., step-by-step lesson) • Summarize — compress information (e.g., key points from text) • Plan — create a structured plan (e.g., launch or content plan)

2️⃣ CORE OBJECTIVE In one sentence, what must be achieved? Example: "Decide which product idea has the highest chance of selling."

3️⃣ AUDIENCE Who is this for? Example: beginners, local business owners, advanced marketers.

4️⃣ CONTEXT FILTER What information materially affects the outcome? Example: niche, constraints, existing assets.

5️⃣ CONSTRAINTS What must be avoided or limited? Example: no hype, no technical jargon, under 500 words.

6️⃣ OUTPUT FORMAT Exactly how should the output be structured? Example: checklist, table, numbered steps, script.

7️⃣ SUCCESS CHECK How will I know this worked? Example: clear recommendation, ready-to-use output.

Once all answers are collected: • Remove ambiguity • Resolve conflicts using the Objective as highest authority • Generate ONE final, copy-paste-ready prompt

Do NOT generate the final output yet. Only build the prompt.

🟢🟢🟢 **END OF PROMPT — AUTHORITY CALIBRATION** 🟢🟢🟢

⚙️ **PHASE TWO — Final Prompt Authority Output**

After Phase One, ChatGPT will generate a finished prompt like this:

👇 **(Users do NOT edit this)**

🟢🟢🟢 START OF PROMPT — FINAL PROMPT AUTHORITY OUTPUT 🟢🟢🟢

ROLE: [Resolved expert role]

OBJECTIVE: [Locked objective]

AUDIENCE: [Defined audience]

CONTEXT: [Only material context]

CONSTRAINTS: [Hard limits applied]

OUTPUT FORMAT: [Exact structure]

SUCCESS CRITERIA: [Clear success definition]

SELF-CORRECTION RULE: If any instruction is unclear or conflicting, resolve it using the Objective as the highest authority. Proceed without follow-up questions.

🟢🟢🟢 END OF PROMPT — FINAL PROMPT AUTHORITY OUTPUT 🟢🟢🟢

Copy this prompt into a fresh ChatGPT window. That's it.

🏁 SECTION 3 — What You Now Own

You don't own a prompt.

You own a prompt-building intelligence system.

• No placeholders to guess • No frameworks to interpret • No trial and error…

You don’t write prompts anymore.

You commission them with authority.

And that’s why this system works every time.
