Guide to using the models… **PLEASE READ**

*If you open this document in **Safari** browser on your phone the models may be blurry. Idk why, it's a Safari thing. If you open it with google or chrome on your phone it should be fine. If you are on mobile I recommend you download the **Google Docs app** and when you click the link from my website it will just auto open it in the Google Docs app and the images will appear fine.

MEMO

-11:58am

Start to see a lot more agreement between models over the past couple days. So this will be the last weekend I will be posting the Purple Model. This will not only cut down the volume of plays per day, it will also leave us with only the sharpest angles on the slate. As you can see, not only are the plays similar between Purple and Blue but the Blue has slightly smaller edges, which means it is becoming more accurate. So thats what Ill do, Purple will be posted through the weekend so you can have it but on Monday I will move forward with just the Blue model

My NBA fans, I know you are itching for some NBA plays. The playoffs are here and it's an exciting time. I am not forcing anything on these play in games. The playoffs are very long and there will be more than enough games to bet on. No reason to rush things early. Play in lines are sharp; there's really no value on these games. Makes sense since there are only 6 games so books are all over the lines. Be patient there will be plenty of NBA action over the coming weeks.

As for this week's performance thus far it was a great day Monday, bad day Tuesday, even day Wednesday, and 0-1 yesterday. So def a little regression from the model due to the disaster that was Tuesday. I was kind of waiting for it after the Models performed so well the first 10-11 days. Was unfortunate that I wasn't posting the first 10 days as I was building it and tracking the results. A necessary process since I didn't want to build something, post it immediately, then it turns out to be complete garbage right off the rip. So once again I stress patience. The foundational principle of the model is profitable long term, playing the value where it lies, but there will be bad days. It has already shown me that we can be very profitable using it so I will continue to do so until I see consistently bad results. I am in no rush to make any changes or scrap the entire idea until I see consistently bad results. For now Ill just chalk the bad Tuesday as an anomaly and keep it moving.

Nick Lodolo 8+ (+140)

Honorable Mentions:
Lodolo Daily Strikeout Leader +700
Anderson 6+ (+172)
Flaherty OVER 6.5 +112
Ryan OVER 7.5 +108
Sale UNDER 6.5 +106

So plays under the model are my official plays. I will post honorable mentions as well. Honorable mentions will not be graded and I personally won't be on them but I'll add them here. Variety of reasons I may not play them are: Pitcher proj looks good but i don't love the price, or pitcher proj is close and i like the price.

Like I said , I won't be grading the honorable mentions but I will provide them in case you want to use them in some way or even play a K Prop Parlay (which are fun). However you want to use the info is up to you.
