

For Immediate Release

## **Introducing Airmini - Most Powerful and Fastest Wireless SSD**

*The fastest wireless external SSD Airmini*

*Airmini is a 4TB wireless SSD that creates a wide range of possibilities for data use. Designed specially for photographers, gamers, and regular PC users.*

January 25th, 2020, The Airmini external SSD is going to launch on Indiegogo. We pride ourselves in announcing that the fastest external SSD in the market Airmini is officially up for grabs to consumers after several months of development processes.

Our core engineering team behind Airmini has put all efforts to emulate the best-read and write speeds on the market to 2,200MB/s - a breakthrough unachievable for any other external SSD.

Airmini is a wireless compact SSD that can be used as your own cloud storage. Users can access the data wirelessly from the SSD. Up to 12 devices can work wirelessly at the same time. On top of the fast speed and highest capacity storage, Airmini with its in-built anti-overheating mechanism.

- Airmini is powered by Thunderbolt™3. This space-age universal cable connectivity solution facilitates Airmini to hit steady read and write speeds of up to 2,200 MB/s.
- With an IP67 rating and robust design, Airmini can stand up to any challenge — water, dust, or shock.
- Its DRAM cache chip pre-processes transferring of files so that you can copy multiple contents efficiently. And the premium aluminum shell design ensures constant heat dissipation to fend off overheating.
- Record & backup directly from professional video cameras in RAW and 8K, without requiring any external monitor.

Airmini offers 1TB, 2TB, and 4TB capacity options to cater to the storage needs of a wide range of customers. It is compatible with any USB-C and USB-A-enabled devices such as Macs and PCs (featuring Thunderbolt 3 and Thunderbolt 4 ports), tablets and smartphones, photo and video cameras, game consoles (Xbox, PlayStation), etc.

Dual thermal pads, optimized surface area, and built-in heatsinks deliver sufficient heat control to Airmini. Apart from providing the fastest data transfer speeds, protection from overheating, and multiple storage capacities, the newly launched external SSD raises the expectations and minimizes all safety concerns for the data with its water-, dust, and shock-proof design.

And finally, all these features are neatly packed within a palm-sized futuristic design of the SSD. Irregular shapes, glossy surfaces, finely carved notches, and space-saving build afford you the feel of a high-end device right in your hands.

Currently available in black color with more colors being unpacked as smart stretch goals, you can check out Airmini by visiting our official [Indiegogo page here](#).
