

YouTube Calculator

Sales Thread:

<https://ytr-how.to/YTR/>

Instructions

1. First run

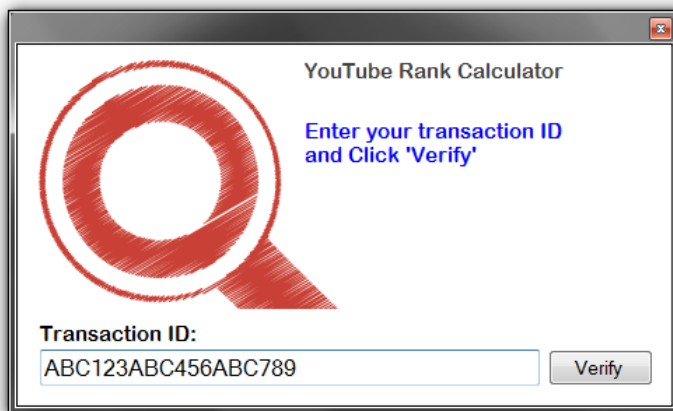

- Run **YTR.exe**
- Use your PayPal's payment unique transaction ID to activate your license (copy paste it).
- Click verify - your license will be manually activated in 0 - 24 hours.

Notes:

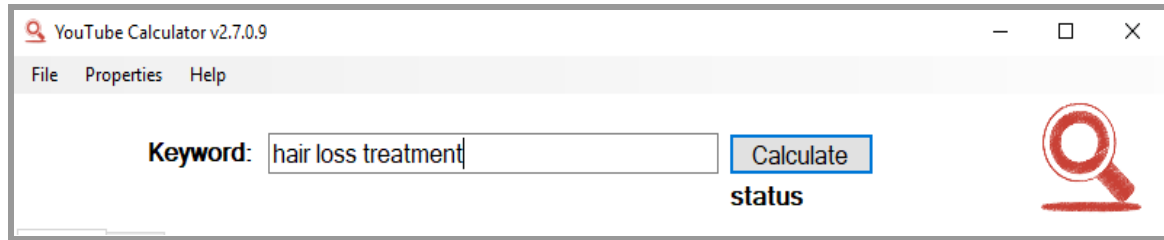

If you experience problems feel free to contact our support via skype (wiktorpl220).

Always update your software to the latest version.

 updater.exe	1/01/2013 7:35	Application	388 KB
 YTR.exe	17/04/2013 9:24	Application	901 KB

2. Making it work

- Input your main keyword into the top textbox, and hit *Calculate*.
- That keyword will be calculated and the result is shown in the “Keywords” tab.
- At the bottom a lot of Related Keywords are displayed.
- The “First Page” tab display the first **X** video’s in YouTube with many attributes

Column headers:

- **Results:** The amount of results found in YouTube for this keyword.
- **avg. views:** The average amount of views of all the video’s on the first X pages.
- **new/old video’s:** how many video’s are New or Old (+1 year).
- **highest views:** The highest amount of views a certain video has on the first X pages.
- **smallest views:** The smallest amount of views a certain video has on the first X pages.
- **overall:** If the % Good is below 50% then this results in an overall “Bad” keyword.

Very useful actions:

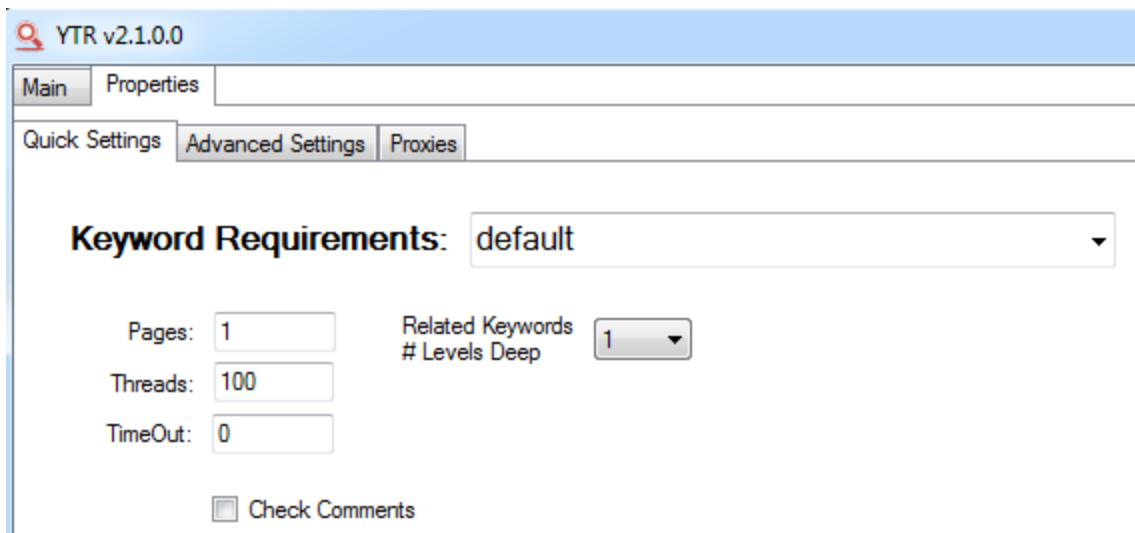

- **Related Keywords:**
 - **Right clicking:** Shows a menu with calculation/copy to clipboard actions.
 - **Calc Selected:** Select a keyword from the list to calculate it.
 - **Calc all:** calculate all the keywords from the list.
 - **Quick keep:** quickly saves the selected keyword(s) from the list to a *kws.txt* file.
 - **Keep list:** exports all keywords to a custom .txt file.
 - **Remove:** removes the selected keyword(s) from the list.
 - **X:** Aborts a “calc all” running operation (takes max. 1 minute to abort).
 - **C:** clears the list (removes all)
 - **i:** Import a list of keywords (no delimiter, new line list only)
- **Keywords Actions:**
 - **Right clicking:** Copies the selected Cell to your Clipboard
 - **Quick keep:** Quickly saves the selected Cell to *kws.txt*
 - **Keep kw's:** exports all the keywords to a custom .txt file.
 - **Remove:** removes the selected row
 - **Clear:** clears the entire grid.
- **First page actions:**
 - **Right clicking:** Copies the selected Cell to your Clipboard
 - **Keep url's:** exports all the url's from the “First Page” grid.
 - **Clear:** clears the entire grid.

Note:

Most controls, labels, button and textfields have a tooltip text, with more information.

3. Properties

Quick Settings

Keyword Requirements: This makes the use of this software a lot easier than ever before! No more searching and trying out different advanced settings. Choose the style of keyword research matching your skills/experience/requirements.

Pages: How many pages should be analyzed for each keyword (1 page contains approx. 10 video's in YouTube).

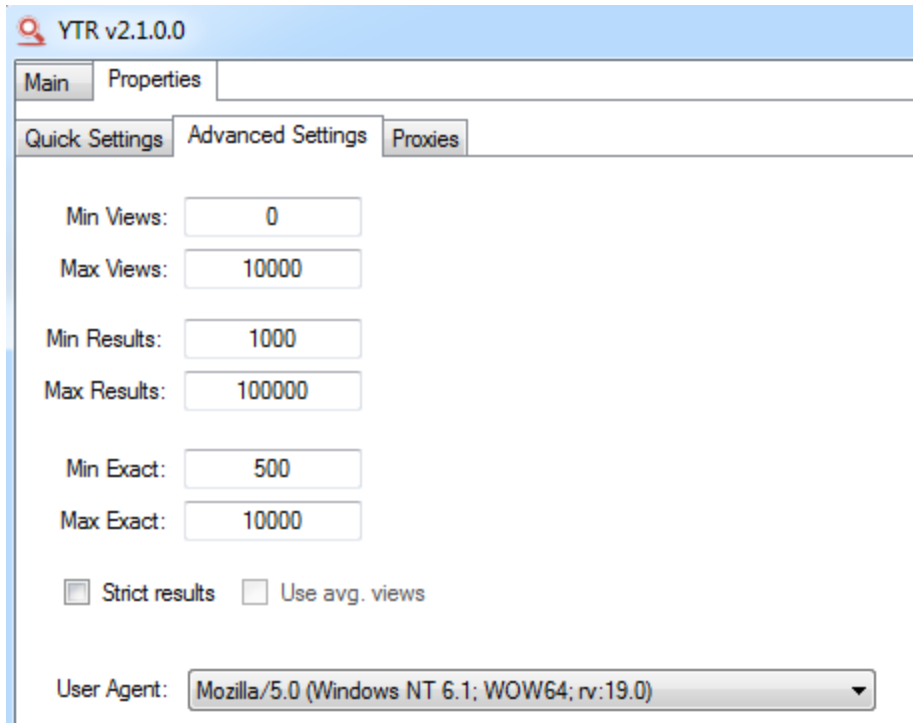

Threads: How many threads should be used to perform multi-threaded actions (such as: 'Calc All'). It is very recommended to keep this number between 1 - 20.

TimeOut: If you want to use a lot more threads, it is recommended to set it between 1000 - 10000. This makes sure Google does not return "null" results due too many requests.

Check Comments: If you would like to analyze comments for each video, this drastically reduces the speed for calculations, use it only if you need it.

Related Keywords #Levels Deep: How many levels deep should the software search for Related Keywords. Default is '1' and it can return dozens up to hundred of results. If you set it to '2' then even thousands of different keywords can be returned, but it takes a lot of time.

Advanced Settings

The screenshot shows the 'Advanced Settings' tab of the YTR v2.1.0.0 application. The window has a blue title bar with the application name and a magnifying glass icon. Below the title bar are three tabs: 'Main', 'Properties', and 'Advanced Settings' (which is selected). Under the 'Advanced Settings' tab, there are several input fields and checkboxes. The 'Min Views' field is set to 0, 'Max Views' to 10000, 'Min Results' to 1000, 'Max Results' to 100000, 'Min Exact' to 500, and 'Max Exact' to 10000. There are two checkboxes: 'Strict results' and 'Use avg. views', both of which are unchecked. At the bottom, there is a 'User Agent' dropdown menu showing 'Mozilla/5.0 (Windows NT 6.1; WOW64; rv:19.0)'.

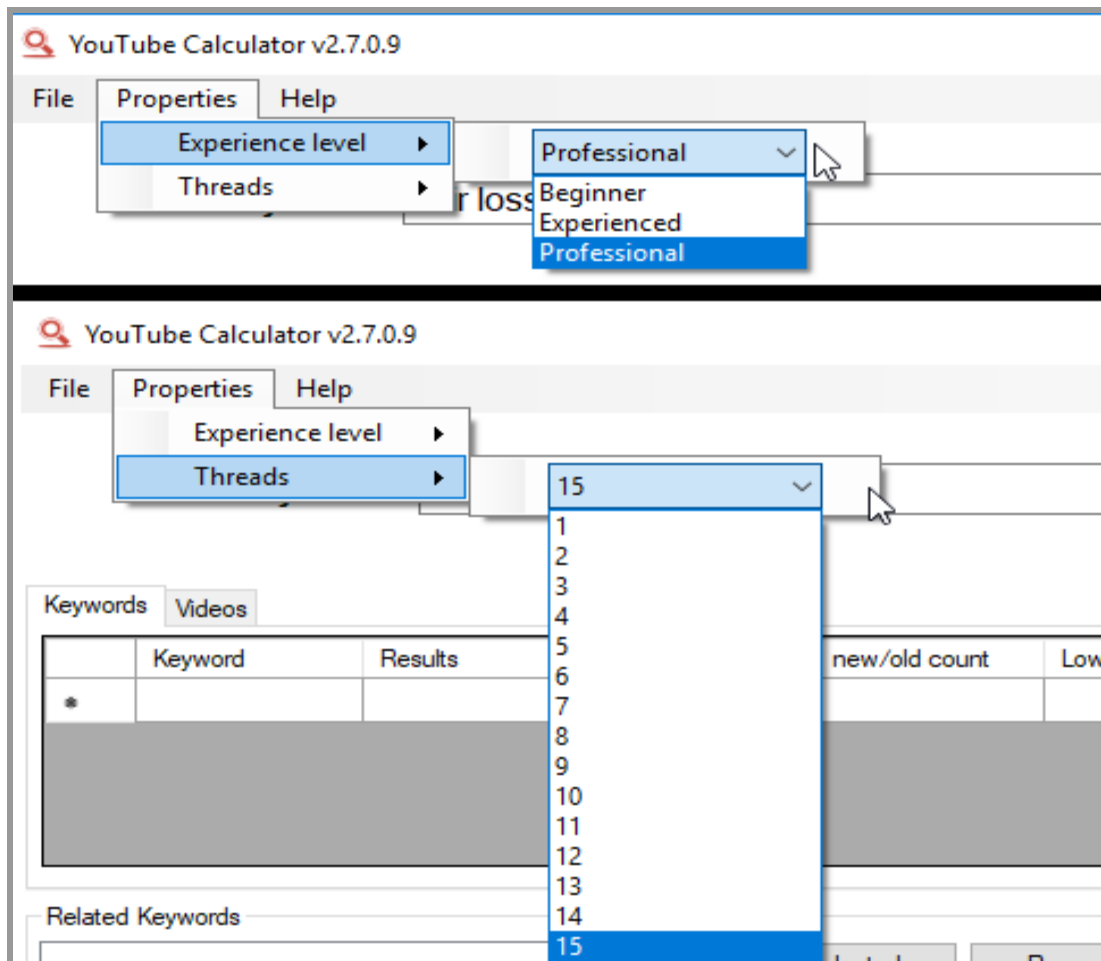

Setting	Value
Min Views:	0
Max Views:	10000
Min Results:	1000
Max Results:	100000
Min Exact:	500
Max Exact:	10000
Strict results	☐
Use avg. views	☐
User Agent:	Mozilla/5.0 (Windows NT 6.1; WOW64; rv:19.0)

These properties are an important feature for the algorithm to determine whether a keyword is GOOD or BAD. These properties depend on your Marketing Strategy, your budget, techniques and skills.

- **Min Views:** How many views should your competition have at least?
- **Max Views:** How many views is too much for you to handle?
- **Min Results:** How many results should there be at least for a keyword in Youtube?
- **Max Results:** How many results should there maximum be in YouTube?
- **Min. Exact:** Using YouTube's keyword tool, how many exact searches should the keyword have? *(this only works for few keywords, leaving this default is recommended)*
- **Max. Exact:** Using YouTube's keyword tool, how many exact searches should a keyword max. have? *(this only works for few keywords, leaving this default is recommended)*

recommended)

- **User Agent:** If you need a custom user agent for your internet connection, you can choose one from the list. Leave it on default if you don't know what you're doing.

- Threads: Amount of threads performing actions (more = faster)

System Requirements

The software runs without any problem on Windows machines.

Windows XP
Windows Vista
Windows 7

Windows 8

Windows Server 2008 (R2)

with **.NET Framework 3.5** or higher
