

Title (English 13pt, Bold, Italic, Centre)

Author's name (12pt, bold)

Author's Affiliation (11pt)

Email (11pt)

ABSTRACT (10pt, Bold)

Abstracts are written in Indonesian and English with lengths of 150-200 words each and are tilted with Calibri 10 typed points with 1 spacing in 1 paragraph. Abstract is arranged with short sentences, clear, coherent, and systematic and can describe the research process from background, objective, method, research implementation, to the conclusion of research result.

Keywords : (3-5 keywords)

1. Introduction

Introduction contains brief and concise research backgrounds, and objectives. Theoretical support is included in this section, similar research that has been done can be stated. Introduction is written without subtitles / sub chapters and stating the outset of articles substance containing topics, gap phenomena / research gap / theoretical gap, problems, objectives, originality, grand theory / theory used in the study, and hypothesis formulation. The presentation should be coherent chronologically and the logical relationship between one paragraph and the following paragraph should be clear.

The article employs single-spaced (1 space), uses A4 paper size, Calibri typography, 11 pts font size, except for tables, graphics, pictures, etc, which adjusts the author's requisite, or, unless the formats are specific in each article section (eg. , references, etc). The length of the article including abstracts, correspondence, content, and references is 4,500 to 5,500 words. Table is presented in the middle of the text with its information is aligned with the left margin and located above the table flat table placed above the table. Pictures and graphs are presented in the middle of the text with the information is placed on the bottom of the objects. Each table, picture, and graph is counted as 200 words. The entire manuscript (including tables, images and mathematical equations) is written in an editable format for editors.

2. Methods

This section contains a complete and detailed description of the steps undertaken in conducting of research. This section describes the types of research and data types, population and sample, operational research variables, the data used (types and sources), data collection technique, and data analysis technique (model analysis).

Table 1. An example of a table

An example of a column heading	Column A (t)	Column B (t)
And an entry	1	2
And another entry	3	4
And another entry	5	6

All figures is copying in the format of jpg or png. Below is an example of the figure :

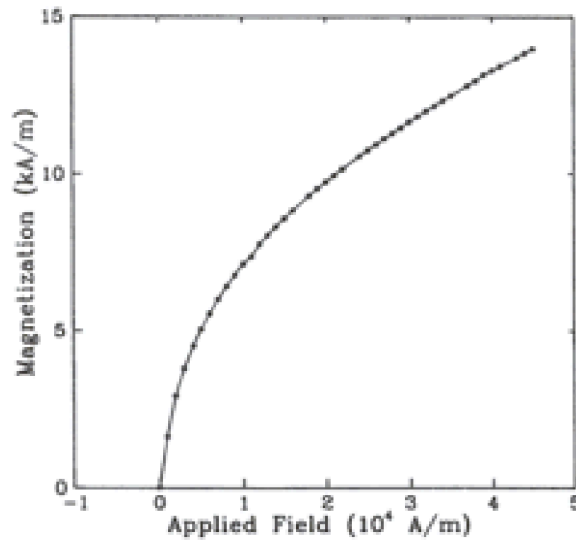

Figure 1. Magnetization as a function of applied field

3. Result and Discussion

Results and Discussion is a section that contains all scientific findings obtained as research data. This section is expected to provide a scientific explanation that can logically explain the reason for obtaining those results that are clearly described, complete, detailed, integrated, systematic, and continuous.

4. Conclusion

Conclusion answers the objectives of research or study based on more comprehensive meaning of results and discussion of research. Suggestions are addressed for practical action (to the participating institution), for the development of new theories, and for further research. The discussion of the research results obtained can be presented in the form of theoretical description, both qualitatively and quantitatively. In practice, this section can be used to compare the results of the research obtained in the current research on the results of the research reported by previous researchers referred to in this study. Scientifically, the results of research obtained in the study may be new findings or improvements, affirmations, or rejection of a scientific phenomenon from previous researchers.

Acknowledgement

Acknowledgements enable you to thank all those who have helped in carrying out the research. Careful thought needs to be given concerning those whose help should be acknowledged and in what order. The general advice is to express your appreciation in a concise manner and to avoid strong emotive language.

References

Manuscripts are written by using standard citation application (Mendeley/ Endnote/Zotero). Reference uses APA6 (American Psychological Association) style reference manager with 10pt Calibri font. The references used had better be the latest references published in the last 10 years since the article is written. The total literature

required is 18 or more and at least 80% of them are primary sources (for example, scientific journals). References are arranged alphabetically, chronologically and typed in indentation style, single-spaced, for example:

Demiralp, I., D Mello, R., Schlingemann, F. P., & Subramaniam, V. (2011). Are There Monitoring Benefits to Institutional Ownership? Evidence from Seasoned Equity Offerings. *Journal of Corporate Finance*, 17(1), 1340-1359.
