Fresh skin loading.

Chemical peels accelerate the skin's natural renewal process by gently exfoliating the outer layers of the skin. As the skin renews itself, it becomes smoother, brighter, and more even in tone.

Peels can address concerns such as **acne, hyperpigmentation, sun damage, and fine lines**, making them a powerful treatment for improving overall skin clarity.

Benefits

- Improves skin tone and brightness
- Helps reduce acne and congestion
- Improves uneven texture
- Stimulates new skin cell turnover

Who Is a Good Candidate

Ideal for patients struggling with:

- Acne or breakouts
- Pigmentation concerns
- Dull or uneven skin tone
- Early signs of aging

Downtime & What to Expect

Patients may experience **mild peeling for several days** depending on the strength of the peel.
