## Preface

This project has been assigned by UNGOC Colonel “Selfless”, after receiving word from the PTOLEMY division about a request for new weapons to be developed at the Pinewood FOB. The project has been divided into 3 phases, which will be described below.

<b>Preface.....</b>	<b>2</b>
<b>Phase 1 - Finding the baseline.....</b>	<b>3</b>
<b>Phase 2 - Constructing new weapons.....</b>	<b>4</b>
<b>Phase 3 - Testing at the firing range.....</b>	<b>9</b>

## Phase 1 - Finding the baseline

In order to begin construction of the first prototypes, a baseline needs to be established, upon which the weapons will be manufactured. For this purpose, weapon trials will be conducted, consisting of 3-4 firearms from each weapon category. The list of firearms to be tested will be described below.

### Type: Assault Rifles

Subjects: AS-VAL, AR-15, CZ-805, Karma-45

Subject Nominated: AS-VAL

### Type: Sniper Rifles

Subjects: Barrett M82, Cheytac Intervention, VKS

Subject Nominated: VKS

### Type: Pistols

Subjects: S&W 659, M1911, M9, 44. Magnum

Subject Nominated: 44. Magnum

### Type: Explosives

Subjects: Frag, Sticky, Nitro, Nerve Gas, SLAMs

Subject Nominated: Nitro

### Type: Rocket Launchers

Subjects: Matador, M202, AT4

Subject Nominated: M202

### Type: Heavy Weapons

Subjects: Auger (Regular & Government), AA-12

Subject Nominated: AA-12

### Type: Shotguns

Subjects: SPAS-12, Nova, KSG-12, Typhoon-12

Subject Nominated: Typhoon-12

### Type: Energy weapons

Subjects: Hailstorm, K-BAR, Raijin, Sanctum, X-EON

Subject Nominated: K-BAR

### Type: Light Machine Guns

Subjects: M60, M249 Para, M240B, KAC Stoner

Subject Nominated: KAC Stoner

### Type: SMGs

Subjects: Scorpion EVO, P90, FHR40

Subject Nominated: FHR40

## Phase 2 - Constructing new weapons

Once the baselines for the new firearms are established, construction will commence. This batch of weapons will consist of both conventional and energy-based firearms, with some utilizing plasma technology. Below is a list of all weapons that will be developed as part of the project.

### **Designation:** Devotion LMG

**Type:** Energy Weapon

**Capacity:** 120

**Ammunition:** Plasma Cells

#### **Description:**

An energy machine gun. Its rate of fire increases as the user holds down the trigger thanks to its electronic RPM regulator, going from 450 RPM, up to 1200 RPM, which allows the user to fire accurate bursts, or provide rapid suppressive fire. Thanks to its plasma ammo, it excels at penetrating body armor, thanks to its superheated shots.

### **Designation:** HAVOC

**Type:** Energy Weapon

**Capacity:** 40

**Ammunition:** Energy Cells / Nuclear Battery

#### **Description:**

An energy rifle, firing at 750 RPM. While it does need a moment to charge up before firing, it has two firing modes. Fully automatic barrage, and a semi-automatic high-power beam. Comes equipped with a picatinny rail to mount any standard optic attachment. While loaded with energy cells by default, it can instead be loaded with nuclear batteries, overcharging the rifle, removing the need to charge up before firing, and amplifying its damage, but also decreasing accuracy.

### **Designation:** Kraber AMR

**Type:** Anti-Material Rifle

**Capacity:** 4

**Ammunition:** 20x110mm Hispano (Can be loaded with HEAP, or other types of payloads)

#### **Description:**

A bolt-action anti-material rifle, this weapon is chambered in the strongest cartridge ever used in any handheld weapon worldwide. To manage its monstrous recoil, a retracting barrel, and a set of buffers in the stock allow it to reduce the recoil to be on the same level as a Barrett M82. Perfect against heavily-armored targets.

### **Designation: Longbow DMR**

**Type:** Designated Marksman Rifle

**Capacity:** 10

**Ammunition:** 458. SOCOM

#### **Description:**

With its free-float barrel and buffered stock, the Longbow is simple in its design, capable of landing precise shots at any range, and the built-in foregrip reduces recoil and increases user comfort while firing. It uses the same magazine system as the AA-12 shotgun, which allows the user to quickly reload the weapon with little to no training needed.

### **Designation: G7 Scout**

**Type:** Battle Rifle

**Capacity:** 20

**Ammunition:** 416. Krieghoff Magnum (Custom Cartridge)

#### **Description:**

A distant cousin of the famous M14 rifle, the G7 Scout is a short-recoil semi-automatic rifle that fires a specialized 416. Krieghoff Magnum cartridge, increasing its stopping power, velocity and effective range, without sacrificing much recoil control. Its free-float barrel allows it to maintain high accuracy despite the power of its ammo. While it does not excel at extreme ranges, its high rate of fire allows it to dispatch any target at close and medium range.

### **Designation: R-301**

**Type:** Assault Rifle

**Capacity:** 40

**Ammunition:** 5.56x45mm

#### **Description:**

Fast, lightweight and accurate, the R-301 is the little brother to the Longbow DMR, utilising the same magazine and chambering system, but chambered in a lighter cartridge. Its high rate of fire more than makes up for this rifle's weaker firepower. While not as accurate as the Longbow, this weapon is perfect for close quarters combat.

### **Designation: CAR**

**Type:** SMG

**Capacity:** 40

**Ammunition:** 45. ACP

#### **Description:**

It may not have the fastest rate of fire, but it's 45. ACP cartridge more than makes up for that flaw. It is compact, accurate and highly maneuverable, perfect for close quarters combat. Simple, yet effective.

### **Designation: Alternator**

**Type:** Machine Pistol

**Capacity:** 40

**Ammunition:** 9mm Parabellum

**Description:**

This unorthodox looking bullpup pistol fires two shots per trigger pull from both of its barrels, at 650 RPM. Very compact and lightweight, but somewhat inaccurate, this machine pistol is a perfect backup weapon for any operative on the field, assuming they can withstand the recoil caused by firing two bullets at once.

### **Designation: Rampage LMG**

**Type:** Light Machine Gun

**Capacity:** 120

**Ammunition:** 576. Rampage (Custom Cartridge, also known as the RG-6)

**Description:**

This behemoth of a weapon is what happens when one puts the power of an M2 Browning into an M249-sized package. Its high rate of fire, magazine size and swift reload speed makes it the most devastating LMG in existence. Its custom cartridge can also be loaded with HE rounds, armor piercing, and others. However, it requires extensive training to maintain its recoil.

### **Designation: M600 Spitfire**

**Type:** Light Machine Gun

**Capacity:** 150

**Ammunition:** 7.62 NATO

**Description:**

It may have a fire rate of only 600 RPM, but it's got enough stopping power to handle even light-armored vehicles. With its robust chamber and durable titanium frame, this weapon has high accuracy, magazine size, fast reload speed and moderate recoil, but low rate of fire. A perfect weapon that can withstand mud, sand, water, and other earthly elements without any problems.

### **Designation: EVA-8 Auto**

**Type:** Shotgun

**Capacity:** 8

**Ammunition:** 10G Shells

**Description:**

The EVA-8 is the first automatic shotgun to use the more powerful 10 Gauge shotgun shells. Due to the size of its ammo, a drum mag was installed to keep the weapon maneuverable. It may be heavy, and may have high recoil, but the shotgun's lower rate of fire and powerful cartridge more than make up for it.

### **Designation: Mastiff**

**Type:** Shotgun

**Capacity:** 6

**Ammunition:** 12G Shells

**Description:**

As far as ergonomics go, the Mastiff may be similar to the SPAS-12, but it has a unique feature. The barrel is equipped with a HPDS module (Horizontal Pellet Dispersal System), which allows the weapon to have a horizontally distributed pellet spread, which makes it a perfect weapon for sweeping rooms and hitting multiple targets at once. Its ergonomic stock also allows for great recoil control, making it a great weapon in the right hands.

### **Designation: Mozambique**

**Type:** Pistol

**Capacity:** 6

**Ammunition:** 440. Buckshot (Custom Cartridge)

**Description:**

This unusual looking handgun is a fully automatic pocket shotgun. It uses a custom 440. Shotgun shell, which is a compact variant of a regular 16G shell, loaded into a small box magazine at the top of the receiver. The magazine is mounted by a rail system, similar to that of the AA-12, allowing for rapid reloads, and rapid engagement.

### **Designation: P2020**

**Type:** Pistol

**Capacity:** 14

**Ammunition:** .38 Special

**Description:**

A more traditional-looking firearm, this pistol comes with a built-in laser, allowing for rapid target acquisition, as well as a set of magnets, which can attach themselves to a holster designed specifically for this type of handgun. Very quick to unholster, fast target acquisition, and great accuracy, this weapon is a vehicle driver's best friend.

### **Designation: Prowler PDW**

**Type:** SMG

**Capacity:** 20

**Ammunition:** 10mm Auto

**Description:**

With low recoil and high rate of fire, this compact SMG is a sidegrade to the P90, with more rate of fire, but low accuracy. Even with its lower than average magazine size, this weapon has a magazine well reminiscent of the TTI Competition magazine wells designed for rapid reloads, which makes up for the low magazine size.

### **Designation: R-99**

**Type:** SMG

**Capacity:** 27

**Ammunition:** 9mm Parabellum

**Description:**

Very cheap, simple in construction, compact and lightweight, this SMG is a best friend for any paratrooper, with its retractable stock, angled magazine and high rate of fire and accuracy. It may be slower to reload, but it is a negligible flaw for trained soldiers on the field.

### **Designation: RE-45 Auto**

**Type:** Pistol

**Capacity:** 16

**Ammunition:** 45. Krieghoff (Custom Cartridge)

**Description:**

This pistol is the older brother to the Glock 18 automatic pistol. With higher magazine size, slower rate of fire and high accuracy, it is a much more controllable pistol, and is loaded with a specialized cartridge, which excels at penetrating non-armored targets, which also provides it with great recoil control.

### **Designation: Wingman**

**Type:** Revolver

**Capacity:** 6

**Ammunition:** 454. Casull

**Description:**

This double-action revolver is loaded with the most powerful cartridge used in any pistol worldwide. With its titanium frame, and recoil to match, it gives just enough recoil control to prevent the shooter from breaking their wrists, and great accuracy for skilled shooters. The cylinder can be removed for quick reloads by opening up the frame with the flip of a lever, making it a great backup weapon for anyone strong enough to withstand its recoil.

## Phase 3 - Testing at the firing range

Once the weapons are stress-tested by the PTOLEMY division, they will be distributed to the rest of UNGOC units, and brought to the firing range. Below is a full list of weapons tested, and feedback given by the troops. Once the firing range tests are concluded and successful, they will be brought in for on-field testing. Otherwise, they will be brought back to the labs for any necessary repairs and maintenance.
