

The dankest power ever.

How memes are tested:

A neural network reads through 4chan and other sources, learning from their users and adding memes to its database. Each meme is given a dankness rating depending on its popularity and the date when it was first posted.

The mod hooks into this neural network via a web API.

Power units: Memewatts

Icon: Pepe Power - <http://imgur.com/gbVJpI9>

Power Generation:

- Dank Extractor
 - Generates power from memes. Each link is rated on its dankness and that value starts getting lower with time. You can process multiple links at a time to get more power, but you'll need to use multiple generators if you want a lot of throughput. One generator will have a power drain limit and when it can't get enough from the current link, it'll start draining the next one in the queue. This is server-wide, so when a link is drained, it's drained for everyone.
- John Cena Punching Machine
 - Whatever this does? IT DOES JOHN CENA OF COURSE?!
- Wizard power
 - When you are over level 30, you can magically generate power

Power Consumers:

- Dankifier 9001
 - Allows you to make blocks danker by overlaying memes on top of them
- Airhorninator (<http://imgur.com/DRP5LaS>)
 - Apply to any item to make it sound like an airhorn whenever the player uses it

Misc items and blocks:

- Weed
 - This needs no explanation
- Never forgetti mom's spaghetti
- L33t clock
 - Notifies you when it's l33t o'clock ingame

Entities:

- Snoop Dogg
Because reasons.
- Chunk Norris
A chunk of the world that suddenly gets up and starts chasing you. You're screwed, basically. Only one per world. Boss? Maybe after you kill the dragon?
- Person with horse head:
Runs around placing signs that say "I love it!"
- Jackie Chan:
No idea what he should do.
