

Asian Elephant

While at the zoo yesterday, the most interesting animal I saw at the zoo was the Asian Elephant its elegance was just enchanting to me. I was amazed how wonderful their presence are. The Elephants were just full of joy and happiness.

What really amazed me is their appearance and how really strong these Asian Elephants are. Their eyes are so tiny with a slight squint giving me a such a strong look. Also their build was extraordinarily big and how their trunk is really muscular for it to pick up objects easily.

As I gazed in the Elephant eyes . I wondered how can these miraculous creatures be endangered . Then Poachers came to mind they hunt them down for their tusk, ivory, skin etc because they are very valuable. I tried to comprehend in my mind to come up with ways to help them from becoming extinct.

Such as don't buy any of the products that contribute to making these creatures endangered.

My group were inspired to make good choices for the endangered animals to not be extinct. When we were with a Zoo educator Spx Nu'u learnt there are 5 things contributing to endangered species to become extinct. Climate change, Habitat loss, Introducing pest, Poaching and pollution. My

groups experience was saddening yet an eye opener for all of us. We are going to be changing little by little to make a big change.

*In conclusion,
I'm going to make changes in my life to help those many animals who are endangered.*
