#### Weaver Overview

Weaver serves the built environment. We design solutions that transform construction data into

intelligence.

### Enterprise Intelligence

Insights to optimize project outcomes

### Enterprise Data

Pre-built integrations with data enrichment capabilities

### Enterprise Information

Accessible information from all documents and data sources

### Enterprise Collaboration

Collaborative reporting and communication across all teamstyt

## Opportunities

### Why Weaver

**Metric: 28% Reduced Rework Costs**

Equip your teams with timely, accurate, and comprehensive information for informed decision-making.

**Metric: 25x Increased Data Utilization**

Unlock productivity and profitability. Tap into the 96% of construction data currently unused and transform it into actionable insights.

**Metric: 18% Improved Productivity**

Recover up to 8 hours per week with streamlined information retrieval and workflows.

## Supported Roles

Facility Management ~~(icon)~~

Challenge: Reliably predicting equipment and system failures, leading to unexpected downtime and inefficient resource allocation.

Solution: Integrate sensor data, maintenance records, and inventory data to create reliable forecasts on parts, resources, and costs, optimizing maintenance and resource allocation.

Construction ~~(icon)~~

Challenge: Addressing the skilled labor shortage and ensuring seamless information sharing among construction teams to reduce inefficiencies and safety risks.

Solution: Capture lessons learned and best practices to facilitate seamless information sharing and enhance safety, quality, and overall construction management.

### Contracts ~~(icon)~~

Challenge: Managing complex contract negotiations and ensuring adherence to terms can lead to potential disputes and profitability impacts.

Solution: Standardize contract checklists for drafting and negotiations, then deploy active change monitoring to identify and manage potential changes.

### Data Science ~~(icon)~~

Opportunity: Extracting actionable insights from vast amounts of structured and unstructured data, leading to delayed decision-making and missed opportunities.

Solution: Deploy data normalization techniques and targeted models to generate actionable insights, enabling informed decision-making and uncovering new opportunities.

### Program Management ~~(icon)~~

Opportunity: Uncovering trends and insights across projects can be challenging due to inconsistent data sources and formats, which may lead to missed opportunities and misaligned organizational goals.

Opportunity: Integrate project data into a unified enterprise dataset, enabling real-time tracking, advanced analytics, and alignment with organizational objectives.

### Project Controls ~~(icon)~~

Challenge: Aligning project scope, schedule, and budget to enhance forecast predictability and identify progress and performance risks.

Opportunity: Develop integrated enterprise datasets to monitor project parameters in real-time, ensuring projects stay within scope, on schedule, and cost-effective through predictive analytics.

### Supply Chain ~~(icon)~~

Challenge: Variability and delays in material and service deliveries, causing project delays and increased costs.

Solution: Integrate procurement and logistics data into scenario models that optimize the supply chain for timely and cost-effective delivery of materials and services.

Supported Roles

## Patterns Intelligence

### Continuous Monitoring

Monitor all aspects of project health. Teams receive actionable insights to make decisions that reduce risk, maintain compliance, and optimize delivery. [\[image\]](#)

### Document Compliance

Embedded document insights. Review highlighted risks and discrepancies directly within the document summaries and checklists. [\[image\]](#)

### Continuous Learning

Turn experience into a competitive advantage. Leverage prior decisions and processes to gain insight into potential risks and opportunities. [\[image\]](#)

### Process Automation

Track actions through resolution. Initiate business processes, publish on an external system, and track through resolution. [\[image\]](#)

### Return on Investment

Demonstrate results. Monitor performance by tracking the impacts on key performance indicators. [\[image\]](#)

## How Patterns works

Deliver impact — quickly give teams the insights they need to manage project risk.

### Platform Integration

Create a unified data ecosystem. Connect and normalize sources using pre-built or custom connectors. [\[image\]](#)

### Platform Access

Apply enterprise controls. Create workspaces, groups, and roles to ensure proper access of internal and external teams. [\[image: crop on the administrator column\]](#)

### Data Structuring

Create enterprise datasets. Transform data and structure document information to extract insights and deliver necessary information to teams. [\[image\]](#)

### Model Enablement

Deploy industry-tested models. Enable pre-built models that deliver actionable insights to project teams. [\[image\]](#)

### Collaboration

Increase knowledge sharing. Resolve observations and risks by engaging internal and external team members. [\[image\]](#)

### Process Integration

Streamline processes. Allows teams to initiate processes directly from an observation. [\[image\]](#)

### Custom Orchestrations

Built for your business. Create custom models to manage unique processes, datasets, and outcomes. [\[image\]](#)

### Use Cases

Discover solutions for any role

Deploy proven pre-built solutions that unlock value by reducing risks, maintaining compliance, and optimizing delivery.

### Facility Management

3 Tags: Monitor, Predict, Optimize

Efficiently manage resources and prevent downtime with preventative maintenance planning.

### Construction

Tags: Monitor, Predict, Optimize

Boost efficiency through labor and equipment productivity optimization.

## Contracts

Tags: Monitor, Predict, Generate

Ensure compliance and adoption of best practices and identify potential change orders.

## Cost Control

Tags: Monitor, Predict, Optimize

Predict and optimize project costs efficiently by applying historical trends.

## Procurement

Tags: Monitor, Predict, Optimize

Streamline your processes and part selection, and respond to supply chain disruptions.

## Quality

Tags: Monitor, Predict

Manage installation issues effectively by identifying them early, finding solutions, and preventing future issues through corrective actions.

## Safety

Tags: Monitor, Predict

Prioritize safety best practices and mitigate risks with compliance monitoring.

## Schedule

Tags: Monitor, Predict, Optimize

Accelerate project timelines and resource allocation with optimized schedule sequencing.

## Card: Request a model *[Form]*

Need help finding the model you're looking for? Contact our team, and we'll work together to design, test, and deploy a model tailored to your business needs.

Form: Name, Company Email, 'Help us by describing the model you need' fields

## Integrations

Integrations

A unified data strategy

Integrate with industry solutions through a single, unified API. Weaver handles the complexity with prebuilt integrations.

## Product Features

Explore more of our capabilities

Weaver Patterns offers secure, scalable, and collaborative solutions to facilitate knowledge sharing within your organization.

- Custom Models: Design contextual models that learn and adapt to your business. [\[image\]](#)
- Resolution Workflows: Initiate workflows to ensure proper resolution and corrective action. [\[image\]](#)
- Data Normalization: Consolidate data across platforms, then normalize it into an enterprise data model. [\[image\]](#)
- Industry Standards: Incorporate standards to improve data quality and standardization. [\[image\]](#)

All features [\[link to Features page\]](#)

## Get Started

Ready to get started?

Contact our team to get started or learn more about Weaver.

Form [\[Company Email\]](#)

## Features

[\[Header image\]](#)

Enterprise-ready features designed for security, collaboration, and scale.

## Privacy & Security

[\(Icon\)](#)

- Retention Policies: Own your data. Set document and data retention policies.
- Closed Ecosystem: All your information is controlled and not used for training purposes.
- SOC 2 Type 2: Ensures secure data handling practices aligned to industry standards..
- Workspaces: Easily organize and secure program and project information.
- Projects: Limit access to internal and external project team members.
- Roles: Assign permissions and access by role.
- Single Sign-on: Log in securely with one click.

## Integrations

[\(Icon\)](#)

- Pre-built Integrations: Instantly connect with industry-leading platforms for seamless data and document exchange.
- Custom Integrations: Connect seamlessly with your internal tools.
- Synchronizations: Automate data synchronizations with Weaver and between platforms.
- Integration Monitoring: Ensure the uptime of data integrations and workflows.

## Process Management

(Icon)

- Process Integration: Connect third-party tools directly into project workflows.
- Action Items: Track and manage tasks assigned to users and teams.
- Form Generation: Streamline data entry with pre-filled form fields.
- Process Optimization
- Self-Learning

## Data Management

(Icon)

- Data Quality: Monitor and resolve data integrity issues to ensure accurate and reliable data.
- Data Transformation: Transform project silos into enterprise datasets.
- Data Normalization: Maintain consistent metadata for improved reporting.
- Industry Codes: Align project data with industry-standard codes and structures.

## Document Management

(Icon)

- Document Summaries: Summarize key terms and risks from your documents.
- Checklists: Ensure compliance and document risks with document checklists.
- Document Observations: Real-time visibility to document compliance and risk.
- Industry Standards: Reference industry standards and best practices within documents.
- Policy Compliance: Ensure documentation aligns with internal policies.
- Metadata Management: Track and manage document details and attributes.
- Commenting: Add comments and actions directly to documents.

## Reporting

(Icon)

- Daily Pulse: Receive automated summaries and daily updates on project activity.
- Key Performance Indicators: Visualize trends and track metrics to drive informed decision-making.
- Return on Investment: Monitor Weaver outcomes and returns on investment.

## Customer Support

(Icon)

- Customer Success: Get ongoing support from a dedicated team.
- Feature Requests: Directly request features and stay informed on new releases.
- Support Chat: Access real-time support when you need it.

## Additional Features

(Icon)

- Commenting: Enable threaded discussions within documents and datasets.
- Team Chat: Collaborate with team members with platform chats.
- White Labeling: Customize the platform to match your brand identity.
- Multilingual: Use the platform in your preferred language.

- Tenant Switching: Move seamlessly between organizations or business units.

## Integrations

## About Us

### >>> Who We Are

About Us (Bricks & Bytes)

"I'm not sure if he's hiring the direct person hiring, but hey, hi Tui, I'm reaching out to express my deep interest in succeeding you as CEO of Procore. You've built something remarkable, not just a platform, but a movement that's reshaped the way the world builds. What started above a surf shop is now a mission critical operating system for one of the world's largest industries, and yet the opportunity ahead is even bigger.

Procore is uniquely positioned to lead the next decade of construction transformation. I believe I'm the right person to carry that mission forward. I bring crew, oh yeah, I'm glad you guys agree.

I'm bringing proven experience scaling high-growth sass of businesses across complex multi-stakeholder environments. Simple. I understand the realities of the built world, the fragmented supply chains, the job site chaos, and the tension between schedule, safety and profit and how software can be the glue.

I lead with people. I build teams where values come first, culture scales with ambition and customers feel seen, not sold to. I think like a founder, operate like an owner and move with urgency because this industry doesn't have time to wait for incremental change"

"I liked every one of your tweets for the last three years. Which is not actually too far from the truth. You spent 20 plus years laying the groundwork.

I want to build on that with respect for what's made Procore great and a relentless drive to scale it globally, sanably and impactfully. And I welcome the opportunity to share more."

From Bricks And Bytes: Procore's 4 Steps to Save the Industry - Kris Lengieza - VP of Procore, May 9, 2025

<https://podcasts.apple.com/us/podcast/procores-4-steps-to-save-the-industry-kris-lengieza/id1651008269?i=1000706990603&r=4004>

Unlock the Future of Enterprise Knowledge and Collaboration

At Weaver, we are dedicated to revolutionizing how architecture, engineering, construction, and operations teams build and manage their enterprise datasets. Together, we can build a more predictable and profitable future for your projects.

- **Direct Impact:** Work closely with our team to shape the future of our products, ensuring they meet the unique needs of our industry.
- **First Access:** Be among the first to experience models and tools designed to streamline collaboration and knowledge management.
- **Enhanced Performance:** Discover innovative solutions to improve the predictability and outcomes of your projects.
- **No Cost:** All solutions are available at no cost while in development.

**Form Fields:** First Name, Last Name, Company email, Additional Information (optional text area)

**Form Categories:** Refer to the [Model Categories section](#) for the options and add an 'Other' option. The categories are multi-select.

**Consent:**  I consent to receive communications from Weaver regarding the developer program and related updates.

**Action:** Submit

**Post Submission:** Thank you for your interest in the Weaver Developer Program. We look forward to partnering with you to create innovative solutions that drive success in your projects.

## What to expect

### Onboard

#### Get Started with Ease

- Initial introductions to our team and resources
- Identify focus areas for improvement and select supporting models for development
- Comprehensive training on using the platform and integrating your current datasets
- Connection with dedicated support for ongoing assistance

### Develop

#### Customize Your Experience

- Collaborate with our team to refine the model orchestration, testing, and performance
- Identify and develop the necessary integrations to the selected models and synchronizations
- Evaluate requirements for data quality, mapping, and normalization
- Streamlining data enrichment and data workflow processes

### Monitor

Work towards better project outcomes with ongoing collaboration and support.

- Monitor performance metrics to ensure models are meeting expectations
- Refine your models based on team feedback and performance data
- Expand model deployments to enhance your project outcomes further
- Expand internal and external sources to enrich the enterprise data further

### Collaborate

Gather your teams to discuss results and refine strategies.

- Participate in meetings to discuss project results and metric performance
- Collaborate with the Weaver developer community to share insights and best practices
- Engage with users to get feedback on the platform and solutions
- Collaborating with Weaver's team to identify next steps and improvements.

### FAQ Section

#### Frequently Asked Questions

- What is the cost of participating in the program?  
Only time. There are no licensing costs to participate in the developer program.
- Who owns the data and information used to train the models?  
You. All data, documents, drawings, etc., are yours and are not used to train models used outside of your organization.
- Will this replace any existing enterprise solutions?

Yes and no. Weaver products are designed to add an intelligence layer to your systems of record, not replace them. However, Weaver offers the opportunity to consolidate point solutions with comprehensive solutions for contracts, schedules, cost, quality, etc.

- Where will the data be hosted?  
Microsoft Azure. Weaver is hosted in the cloud, although there are plans to offer on-premise and hybrid options.
- Who has access to the data and information?  
Only you. Data privacy is core to Weaver's mission. Weaver only collects data on platform performance, usage, and model performance.
- What are the minimum data requirements?  
It depends. Some Pattern models require only small amounts of data and are supported by the platform's data normalization features, while Threads and Mesh only require digitized sources.
