

Fixing Saints Row 2's Broken PC Port (& Remastering It)

BladeOpotato

What you need:

The GOG version of Saints Row 2 (Fresh Install)

Start a New Game (unless you ran a save with GOTR installed previously)

Note: You can still run this modlist using the Steam Version of Saints Row 2, however, the Juiced Patch will inform you when starting the game that it recommends running the GOG version to experience the least amount of crashes.

You can also “acquire” the “.exe” file for the GOG version and replace the one in your Steam folder as well.

Multiplayer:

Just install the Juiced Patch.

When selecting “Co-Op” or “Multiplayer” from the Main Menu, it will ask you to sign in. Create an account at the bottom of the menu.

(YOU DO NOT HAVE TO PUT REAL INFO HERE, IT CAN BE RANDOM;

Email: random@email.com, Pass: password)

Once your account is created, you can sign into it each time you select these options.

Once signed in, that's it, just jump into a match and have fun!

SR1 Weather XTBL(optional)

<https://www.saintsrowmods.com/forum/threads/saints-row-1-weather-xtbbs.20130/>

(This feature has now been implemented into Juiced, however I still run it in my modlist, so I kept it here if you wanted to use it still)

How to Install:

Juiced: Just drop the files into your SR2 directory. To make changes to your game, open "reloaded.ini"

GoTR: Install Instruction included with the mod, I'm not gonna bother copying the info here, just open the readme and follow the instructions. You need this mod to install most of the others to build your games new patch file.

High Quality Music Mod: Drop the files into your SR2 Directory

Every other mod on the list: Drop the files into the GoTR > optional_mod_stuff >

"1-MODDERS_-_PUT YOUR..." folder. Then when running GoTR and building the patch, those files you included will be added to the patch.
