

# Multiplication Bump Game

A math fact practice game for 2 or more players

## **Materials:**

- Two 6-sided dice
- 10 different colored counters, tiles, or other objects for each player
- Game board

## **Directions**

1. Roll dice and calculate the sum of both dice. For example:  $3 + 5 = 8$
2. Then multiply the sum by the fact you are practicing to get the product.
3. Place your cube on the product.
4. If another player's counter is on that number, you gently BUMP them off.
5. If your counter is on that space, you add a second counter and it saves the space. Now you cannot be bumped off of that space.
6. The first player to have no counters left is the winner.
