## Computer Usage

Computers will all automatically sign in and users will have admin privileges which will let them install additional software. On boot, the PC will revert to its original frozen state with the software listed below installed. Because of this best practice for using the PCs is:

1. To reboot or boot a PC when you first get on it to ensure there's no software left on the PC that you don't want to use.
2. Shut down or reboot the PC when done to wipe all of your data

Game updates will be installed to the frozen state overnight
