MD5 : **b76470a74e53947de65c8c3b6b4dadf1** (ISO)

Extract tools:

7zip - <https://7-zip.org/download.html>
Winrar - <https://www.win-rar.com/download.html?&L=0>

MD5 hash check tools:

X64 - <https://www.nirsoft.net/utils/hashmyfiles-x64.zip>
X86 - <https://www.nirsoft.net/utils/hashmyfiles.zip>

Downloader tools:

IDA - <https://westbyte.com/ida/index.phtml?page=download>
IDM - <https://www.internetdownloadmanager.com/download.html>
JDownloader2 - <https://jdownloader.org/jdownloader2> / [Portable + Java](#)

- Download from Qiwi/Swift for maximum speed without limits.
- Use any DNS or VPN if your internet is blocked.

Make USB drive bootable with :

Yumi - <https://www.pendrivelinux.com/yumi-multiboot-usb-creator>

Ventoy - <https://www.ventoy.net/en/download.html>

Balena - <https://www.balena.io/etcher>

Rufus - <https://rufus.ie/en/>

Win2USB - <https://www.techspot.com/downloads/6475-wintousb.html>

- If crashing or stuck while installing using USB, can try to disable secure boot & secure boot mode set to custom in Bios.

NOTE: Also without USB drives can setup windows > Right click ISO > mount > open > run setup.exe

NOTE: To upgrade from previous Ghost Spectre win10/11 without losing data, Right click ISO > mount > open > run setup.exe

You need at least **32GB** of free disk space to upgrade, Any 3rd party AV please disable before upgrade.

You need at least **15GB** drive to fresh install in UEFI mode. (recommend use in UEFI mode)

You need at least **15GB** drive to fresh install in Legacy mode.

How to remove **Windows.old** folder after upgrade or fresh install in same partition. <https://youtu.be/LUwRsKACmeY>

- If got stuck on Other Screen try this to Add Account (SUPERLITE OR SE).
