### ABSTRACT

Consist of **Background, Objective, Methods, Result, Conclusion**. Abstract title is written with Times New Roman font 12 pt and bold. Body of abstract written with Times New Roman font 12 pt, one line spacing without spacing before or after paragraph, preferably not more than 300 words. The abstract should be clear, concise, and descriptive, and should provide a brief introduction to the problem. This should generally be followed by a statement regarding the methodology and a brief summary of results. The abstract should end with a comment on the significance of the results or a brief conclusion.

**Keywords:** anesthesia; bronchus; cardiac; desaturation; endotracheal (alphabetic manner), five words minimal.

### INTRODUCTION

The content of the article uses A4 paper size, top, bottom, right, left margins of 3cm and is divided into two columns. Using Times New Roman font size 12 pt with 1.2 spacing. The introduction contains sufficient background, a brief literature survey to record existing solutions or problem solving methods, to show the limitations of previous research, to show the hope of solving the problem (to overcome the limitations of previous research) and to show the novelty of the research conducted. The final part of the

introduction contains the research objectives.

### METHOD

Research methods are research procedures and techniques. Written clearly and concisely so that it is easy for readers to understand and can repeat similar research (reproduced). Writing formulas using Mathematical Equation. The format of tables and figures can be seen in the example below.

## RESULTS

This section contains data (in a concise and clear form), data analysis and interpretation of the results. Presentation of data is interesting but easy to understand. The format of tables and figures can be seen in the example below.

## DISCUSSION

The discussion is an exploration of the significance of the results, not a rewrite of the results. Avoid excessive citation of other published literature in this section. This is the most important part of the article. The discussion should relate to the results, but not be a repetition of the results. The following should be included in the discussion:

How do the results relate to the research question stated in the introduction? Is there a scientific interpretation of each finding or result? Are the results consistent with other studies? Or are there differences?

## CONCLUSION

The conclusion answers the objective, does not repeat the theory, means stating the results of the research in a concise manner (but not a summary of the discussion).

## REFERENCES

Contains references. Write citations using Vancouver style superscript. Minimum of fifteen references.

**Table 1.** Annual financial ratio 2000-2005<sup>6</sup>

| Year | PA       | PE       | RPE      | RPTA    |
|------|----------|----------|----------|---------|
| 1998 | -123.49% | n.a      | n.a      | 201.40% |
| 1999 | -30.01%  | -763.87% | 2445.65% | 96.07%  |
| 2000 | 0.47%    | 8.28%    | 1676.43% | 94.37%  |
| 2001 | 1.05%    | 25.48%   | 2333.83% | 95.89%  |
| 2002 | 1.43%    | 24.84%   | 1634.64% | 94.24%  |
| 2003 | 1.84%    | 22.49%   | 1123.02% | 91.82%  |
| 2004 | 2.12%    | 21.08%   | 895.21%  | 89.95%  |
| 2005 | 0.23%    | 2.60%    | 1034.54% | 91.19%  |
