

T.V. –

- 1) Problem - Current T.V. media is not bringing in the truth/right information that is happening at the ground level, especially at this time since the last 2 years with regards to 'Covid vaccine' many deaths are happening but the media is not reporting them, yet people at the ground level are realizing it. Certain wrong impressions are given that deaths are happening due to other reasons and can't be proved that increase in deaths are happening since the covid vaccine, also many things about the money system that is changing is not being addressed. T.V. channels are being used by various political parties to put out their propaganda while the common people are actually going through much crucial issues which are not being shown, no proper discussions take place govt. agencies are making their own policies and going ahead and implementing them and the real news on the ground what the people actually need are not being displayed on mainstream T.V. channels.

So how can this change, how can we the people ask for certain things (for eg: doesn't the govt. have some responsibility that the T.V. stream is reaching everybody, that they should have a channel for different things like health, education, things that are important for all Indians so that they can collaborate on certain points and not have a diversion due to lack of information. Though there are a few shows that speak on health, spirituality but no channels/shows dedicated to naturopathy or diet & nutrition or how to improve the immunity or knowledge on proper farming and other proper educative programs.

It's all controlled as the media houses are under certain people, lot's of weird shows/cartoons are shown, so how does one stop that from happening?

There needs to be strict control on what is advertised, especially that which is known to be used by people that causes all sorts of damage, such people/products should not be allowed to be advertised on mainstream channels.

Solution - TV content being vulgar, violent, creating a religious divide amongst people, promoting abortion pills, alcohol, smoking – should be taken up and reviewed by the committee and presented to the govt. by our committees in different states or our main national level committee to put forth this statement that why is such content & advertisement there, it should not be there and this is how it needs to be changed as such content/advertisement is having this negative effect on the people and on the nation and the precedence that just for the sake of making money certain channels, organizations and certain companies cannot go forward and do such things because this is the damage and people polarization that is being created in the name of excitement. This review also needs to be substantiated with a lot of research on how much damage has been done, so that all statements then presented to the govt. are valid and will have more weight age. The damaging content can also be studied by & worked on by Doctorates/PHD's and write a paper both for national & international circulation, this should then come up in the educational field right from the primary stage.

- 2) Govt channel for daily info to people - Another thing that we as people think it is very normal and necessary and a very important recommendation from our committee, for certain things that are happening in this country, there should be one govt channel which is supposed to give daily information that is important to all Indians. This one govt. channel must be available in all states, which will be the medium of instruction to all people in their own regional languages to know and receive instructions from the govt. which is not just limited to calamities but also good/positive information for the benefit of the people.

- 3) Health channel – This should also be part of the govt. since they have such a big health department but will not give out any proper information to people on a daily basis. (for eg: in every state what is the seasonal food that is good for health, so people will be aware and accordingly farmers will start growing more of that) since nowadays people are eating all sorts of junk from all over the world and the local farmers are not growing heirloom local seeds which are good for health and immunity of the people in that region, so what is the point of India having all that ayurveda and all ancient knowledge about the local & seasonal foods, none of this is given to us by the govt. and everyone has to do their research and till they find the truth they keep getting sick.
- 4) (Couple of years back, our friends at a local level were trying to build a website which shows what the seasonal fruits, veggies, pulses, cereals, grains & nuts are in different states of India, so that people will want those foods and farmers will grow those foods, as of now farmers are not growing most of the old crops which are healthy because people are eating all other things, so why should we be doing this after paying taxes, this should be done by the health & agriculture dept. of this country. This kind of information also has to be shown on our T.V. channels.)
- 5) Govt. should sponsor health, agriculture environment etc and ultimately education can only bring about solutions and enlighten the people. Weekly for about 45 mins to 1 hour period the videos should be shown to children of different age groups and every week there can be different topics showing positive & negative aspects of them. This should be relayed through Govt. channels or schools should take up such videos which are recognized by the govt. (or even the committee) and should be compulsorily to the students at least during one period a week because the educational inputs currently given are very limited to only academic knowledge, this should shift the education system in a way where 60% is academic and 40% should be current research based innovations, this will create a great impact on students, leading them to transforming themselves and the world in great ways. Similarly parents must also be given an education on these topics and even on proper parenting of their children. There should also be a proper procedure in place to lodge a police complaint or a PIL against T.V. channels displays inappropriate content that causes all sorts of damages and the T.V. should be heavily penalized.
- 6) The current scenario of awareness and of awakening the consciousness of people is because of technology. The digital communication, digital content and the freedom of excess of information and knowledge is 2 sides of a coin; a lot of good stuff is available and an equal amount of bad stuff is also available, the choice lies with the parents, the teachers, the children, the youth and every other individual. The fact that we are talking to each other is because of technology, and the harm that technology does to the environment in terms of radiation and other issues unfortunately exists but there is a trade off and not a win-win, you can't have information so readily available without bearing the consequences of technology and the damage it does to your health. If you are living in an environment which is toxic because of radiation and if you are accessing information that will make you knowledgeable and make you careful and make you lead a life that is healthier, I think you are a gainer, the problem arises if you are hit by toxic environments and you choose to receive negative communication (harmful content). (There is a concept of titration in chemistry labs, if in a beaker there is an acidic toxic solution and if you pour in alkaline positive substance, there is a point reached when the solution turns alkaline. Technology provides you with infinite freedom to upload and to receive whatever anyone wants, so if we somehow change the mindset of people to upload & access positivity they will receive positivity and will have more choices of positive communication in the info eco system which turn people towards more positive changes in their attitude, so it's best to use technology to reach out to a lot of people and transmit positivity at a faster pace. So the secret is in putting technology to good use which is solely our responsibility.

- 7) So while we can have digital devices, there are lesser harmful screens and lesser harmful radiation, so we must choose those devices & technology which will be a part of our research & development committee, because otherwise the world is just ruled by capitalists who force their technology upon us which makes them money and planned obsolescence (meaning they design things to fail) for eg: once 3G was all over the planet everyone had the hardware for it but to keep making more money they phased out 3G, so this needs to be reviewed by the committee because once the hardware is phased out all of that ends up in scrap and later more holes in the earth are dug for new metals, plastic etc. such finite material belongs to the planet.

About people's choices, now we know whoever pays more money to these channels they get to put their ads on it, likewise certain movies, serials are being aired on T.V. because it is paid for, so those are some of the things that are forced upon the people, so while people want to make good choices they aren't being given that option. So an example of a possible solution would be the Earth Keepers Connect channel mobile app developed in 2019 before the 1st New Earth Summit, every morning we used to have these 4 channels (Health, Food & Farming, Environment, Arts & Culture, Education) sending out information, so every morning upon waking up people would have the opportunity to learn valuable, important and relevant information and all this was curated content from members and experts of Earth Keepers sharing information about workshops, ideas, advice etc. and this could then also be used as an advertisement channel for a certain fee, so we would only allow such ads which were in principle to building this organic natural life and not any other random commercial ads of products that were damaging to health or promoting violence. So this is what we need to do as a committee, build a review to see that we come in as a regulator and put forth ethical principles that even the people know are correct, this should be put forth to all ethical boards of this country, it should always be notified to any ethical board that certain unethical profit oriented acts are being done, along with all 21 committees including the health committee to give the right principles of what should and shouldn't be advertised on should and shouldn't be done. These govt channels should have a one hour slot daily from the national committees of India. So no longer should any T.V. content be free for any highest bidder to channel, there needs to be strict 'Terms & Conditions'.

- 8) How about creating an Entertainment, Information, and Communication platform, which has multiple channels on the platform i.e. a channel on different kinds of positive music for different times of the day, a healthy living channel like for yoga, what best food to eat for what time of the day, what kind of exercises to do, and in general the daily science & art of living, a channel for factual positive news etc. and these channels can be catered via many mediums like mobile, websites, T.V. etc.

So with the use of different channels for different categories/subjects, we also need to keep in mind that every state has to have it in its own language which is a lot of work and with having ads these channels can make money as well.

Telecom & Mobile Phone system –

- 1) Problem – In just one area there are so many different mobile operators which has all their hardware, their signaling devices, so there's too many signals around, dangerous emf radiation happening around. Solution – Our committee needs to propose to the Govt. that not more than 2 or 3 mobile operators will operate in a place and there needs to be regulation of a certain bandwidth of minimum and maximum tariffs that operators provide which should be in the interest of people and also in the interest of infrastructure. This is mainly to decongest the amount of machines and different operators in one area who are only concerned about profit making policies, but knowing that there is an electrification of the entire area, not only human beings, plants, animals, butterflies, bees, all of them are getting negatively

affected, so it is this committee's work to take the recommendation from the environment committee or farming or health committee and put together evidence and request for a change in this policy to reduce emf electrification of living being's living spaces.

- 2) Stopping of 5G towers from being installed – Solution – Has to be worked on by the Integrative Medicine Health Committee (who might be experts on health care sciences and not on radiation), along with Electricity Generation Committee & Telecom Committee experts in one group. Another solution for a lesser harmful impact, is to have cable internet connection instead of WiFi.

The current system is that to find the existing papers & research document which are showing that 5G is harmful, now many of the big research institutes in this world are not giving such information that it is really damaging and if there are smaller organizations who are doing that are not being accepted by the courts just because it is not a big global organization. A way to work around this is to use the correct sensing devices by placing them in various parts of the city which will monitor the radiation level 24/7, there have been claims in north India where people have died due to 5G radiation, it was stated that the 5G radiation was bombarded at night time which is when people felt sick and during the day time it was not so heavy, so we need to create a system where radiation levels will be recorded by computers and that information can be given to our govt departments. Those instruments usually measure radiation from any sources, we need to know what are the damaging frequencies to the human body and our frequencies and if these fields exist we can give the data to the govt and they can decide if it is coming from a satellite or from 5G or some other unauthorized sources or from High Altitude A Research Program (HAARP) machines which are in so many countries that govt. use to modify weather, these are such powerful machines that cause different types of ionization in the atmosphere which cause rainfall hailstorms tornadoes cyclones etc. so that is very dangerous technology that can even affect the human body and can mimic inflammation in the human body because when you put an inorganic electromagnetic field through the human body it can cause inflammation of our lungs, of our digestive tissues, of the brain, of the eyes and can create symptoms like fever due to these inflammations as the body thinks these are germs that are trying to disturb it at the cellular level so immediately your body starts increasing the temperature to create fever and joint pains loss of taste and smell (due to the body being in a fight and flight mode doesn't want its energy to be spent on digesting food) so all of this happening over the last 2 years co-relates to the covid symptoms that do not happen naturally but happening according to the declaration of Bill Gates and other people

Problem – An area near Palam Vihar airport Delhi, where Adv Sahil Goyal visited due to claims of heavy radiation over there in a particular lane and there being an abnormally high number of cancers there along with blindness and deafness all attributing to the cell tower in that lane and they have made petitions to the govt and all kinds of people but nobody is listening and switching it off, so we can identify localities where we are hearing of such cases and identify what is the level of radiation at those areas and then we can report it. An interest lies in stopping the spread, as all these elites want to set up 5G transmitters on all public assets where there could be about 10000 in a lane to initiate the the Internet of Things so they need a seamless transmission of internet connection, for all smart homes etc. Solution – Credible evidence needs to be provided, so once we set up the right team and get the sensor devices made and set it up outside to get the readings for about 15 days, so within 2 months we can have the reports showing these 5G transmitters are damaging.

Brighteon website – “Wi-Fi is an important threat to human health” -
<https://www.brighteon.com/0c399c0b-99ac-46a3-97c2-2b6dad957289>

As a committee we have to challenge this; How does the govt decide to implement this entire system in

the country and what is the research they have done on it and what are the benefits and to whom are the benefits going, who are the stakeholders of this entire operation and if there's a reply such as the technological and hardware companies are the ones pushing technologies, the clear response to it can be that this is just serving the business interests of these agencies, where is the part of how it is serving the people and what research has been done to prove it does not damage human beings, to animals, to plants, to the atmosphere. This is what the committees need to take up, RTIs are being filed by people in this country asking for this and there has been no replies, so just because they are individuals their requests get overridden and no replies are given to them and because there is no big body in this country which is able to hold the govt accountable and say you cant recommend something which has not been tested, so maybe for this a separate 5G Committee of very credible people can be made as that is the emergency right now.

Like union leaders in factories those who were able to lobby against people of power when the common man couldn't have a say similarly like today we small consumers do not have a say, so we need to have a national/global consumer movement who will have weight age when applying for such petitions.

Internet –

Through the dish antenna you can get internet transmission, in cities where there is heavy rainfall the signal gets blocked and there is some interruption as well but we also need to be aware of such like Elon Musk's Starlink when the internet went down in some places and the cables got cut, satellite internet was being used and that was coming from certain floating stations called Loom which below the clouds, so by forming this committee we can propose better science and better solutions for the people at a cheaper rate, so now we already have a dish antenna, a set up box so why doesn't a provider just with the satellite gives us internet as well, with that we can avoid all this fibre optics etc. so as people we have the right to all this and in our proposal, we need to mention why is so much material being used why are so much costs being paid, why has a parallel system been done, why can't we get internet without so much of wiring, so from the dish antenna it comes to the set up box that connected with the normal RJ45 cables and connect it to the PC, Laptop and other internet devices etc. then no wifi is required at all and we're safe from emf signals, then we don't need so much hardware, and we don't need to be spending so much money.
