

We must stay away from internet crime

I would like to present several suggestions on how to stay away from internet crime.

To begin with, in the online chat room. Nowadays using the online chat room is very common. A lot of teenagers like to use the online chat rooms but there are many unknown people who may cheat them. If you are not careful while using the online chat room, you will be deceived by someone you don't know. So you should use the online chat room carefully.

Secondly, about online shopping. Teenagers use Apps to buy things because it is convenient. But, they must not use a public computer to do online shopping because strangers may use the same computer to find out your personal information. It is easy for strangers to access your personal information. If I were you, I would not use a public computer to do shopping as it is very dangerous.

Thirdly, instant messaging is very widespread and now it is easy to chat with friends and family online. But you must be very very careful not to chat with strangers. They may guide you to commit crimes. Therefore, I suggest just using instant messages with your family and friends.

Finally, the sharing of computer files. I think you should not download copyrighted materials. And, you must not download files from unknown sources because they may have viruses.

To sum up, it is important to be more careful while using online chat rooms, doing online shopping and instant messaging. Be a smart internet user.
