

Assessment

- During the lesson, I observed that many of my students were lost, so I gave them the option to continue following along with me through the independent practice.
 - About $\frac{3}{4}$ of the class followed along with me through the independent practice.
- After the independent practice, I told students that they may join me on the carpet (if they are still feeling lost) to go through a couple modified problems together. Five students joined me: [REDACTED]. I believe that working through the modified problems together supported these students in reaching our objective.
- As I walked around during partner work, I noticed that most students completed the assessment practice with an average level of understanding.
- Based on my observation and work with the small groups, I believe a large majority of my students met our objective today, however, some met it with modified work.
- Sticky note exit ticket shows that students are on the right track, but could use some review.
- Students that need additional support (based on observation and sticky notes): [REDACTED]
[REDACTED]

Reflection

- I believe I taught the lesson well and prioritized the appropriate sections.
- I was very flexible with my time and how we worked through each section during this lesson. I changed up the amount of time spent on certain sections, as well as how we went through the independent practice.
- I believe that I could have spent more time modeling during the Solve and Share.
- [REDACTED] pulled me aside during my lesson to suggest that I should give students the option to work through the independent practice with me. I appreciated this suggestion a lot and giving students this option was definitely needed.

Cooperating Teacher's Comments

- The lesson was taught well and you moved slowly through the modeling, which I believe was needed for this group.
- I like how you worked with a group of students through a modified worksheet.
 - The modified worksheet was appropriate.

- I like how you spent a good chunk of time going through the guided practice and asking students how they were feeling about this content throughout the section.
- I appreciate that your sticky note assessment was appropriate for everyone, while assessing our objective.
