

Privacy Policy

Storage Cleaner for Android

Effective date: June 26, 2026

1. Overview

This Privacy Policy explains how the Storage Cleaner application ("the App", "we", "us", or "our") handles information on Android. We built Storage Cleaner to be privacy-first. **We do not require an account, and we do not collect personal details such as your name, email address, phone number, contacts, or precise location.**

In short: the only data tied to you is an anonymous device identifier and your purchase records. Everything involved in cleaning your device — scanning files, photos, videos, and app storage — happens locally on your device and is never uploaded to us.

2. Anonymous use — no personal details

Storage Cleaner does not ask you to sign up or log in. You are identified only by a randomly generated identifier created on your device. We deliberately do not collect:

- Your name, email address, or phone number.
- Account credentials or passwords.
- Your contacts, messages, or calendar.
- Precise geolocation.
- The contents of your files, photos, or videos.

The only information associated with you on our servers is your device ID and your purchase records, plus a small amount of technical metadata needed to operate the service (described below).

3. Information we store

The following is the complete set of information stored on our backend:

Data	What it is	Why we use it
Device ID	A random UUID generated on your device at first launch. Not derived from hardware, advertising IDs, or any fingerprintable data.	Acts as your anonymous account identifier so settings and entitlements stay tied to your installation.
Purchase records	Subscription and purchase data received from Google Play via RevenueCat (product, store, status, transaction IDs, purchase/expiry dates).	To unlock and validate premium features and restore purchases across reinstalls.
Technical metadata	Platform, device model, OS version, app version, locale, and last-seen timestamp.	To operate the service, provide support, and keep the app compatible with your device.
Session token	An opaque access token; the server stores only its SHA-256 hash, never the raw token.	To authenticate your device to our API securely.

Note: Purchase processing is handled by Google Play and RevenueCat. We never receive or store your full credit-card number or payment-instrument details.

4. Information processed only on your device

Storage Cleaner's core purpose is to help you free up storage. To do this, the App reads information about files and apps on your device. This processing happens entirely on-device and the results are not transmitted to us:

Junk files, caches, large files, duplicates, empty folders, downloads, and APK files identified by scanning shared storage; photos and videos analyzed for duplicates, similar items, large media, and screenshots; and per-app storage and last-used information shown in the App Manager.

We never read, copy, upload, or back up the contents of your files, photos, or videos. Selections you make and files you delete are acted on locally through the operating system.

5. Device permissions

The App requests only the permissions needed for its features. You can deny or revoke these in your device settings, though some features may then be unavailable:

- **Storage / files access** — to scan for and remove junk, caches, duplicates, large files, downloads, and APK files.
- **Photos and media** — to find duplicate, similar, and large media you choose to clean.
- **Usage Access** — to display per-app storage and last-used data in the App Manager.
- **Notifications** — to alert you about cleanup results and reminders.
- **Network access** — to register your anonymous device and validate purchases.

6. Third-party services

We rely on a small number of providers strictly to run the App:

- **RevenueCat** — manages subscriptions and purchase validation. Your device ID is used as the RevenueCat app user ID so entitlements can be linked to your installation.
- **Google Play** — processes payments and provides subscription information. Its handling of payment data is governed by its own privacy policy.

These providers receive only what they need to perform their function and are not permitted to use your data for unrelated purposes.

7. How we use information

We use the limited data we store solely to:

- Provide and maintain the App and its premium features.
- Validate and restore your purchases and subscriptions.
- Keep the App compatible with your device and operating system.

- Diagnose problems and provide support.

We do not sell your data, and we do not use it for advertising or cross-app tracking.

8. Data retention

We retain your device ID and purchase records for as long as your installation remains active or as needed to honor an active subscription and meet legal and accounting obligations. Session tokens expire and are rotated. On-device scan results are transient and are not retained by us.

9. Your rights and choices

Because we hold no personal identifiers, the data we store cannot, on its own, identify you. You can still:

- Revoke any device permission at any time through your device settings.
- Stop all data association by uninstalling the App.
- Request deletion of the records tied to your device ID by contacting us. Provide your device ID from the App's settings so we can locate the records.

Depending on your region, you may have additional rights under laws such as the GDPR or CCPA. We honor applicable rights requests for the limited data we hold.

10. Children's privacy

Storage Cleaner is not directed to children under the age of 13 (or the minimum age in your jurisdiction), and we do not knowingly collect personal information from them. Because we collect no personal details, the App is suitable for a general audience.

11. Security

We use industry-standard measures to protect the limited data we store. Communication with our API uses HTTPS in production. Session tokens are stored only as SHA-256 hashes on the server, and on your device sensitive values are kept in Android encrypted storage. No method of transmission or storage is completely secure, but we work to protect your information.

12. International transfers

Our service providers may process data in countries other than your own. Where required, we rely on appropriate safeguards for such transfers.

13. Changes to this policy

We may update this Privacy Policy from time to time. We will revise the effective date above and, where appropriate, notify you in the App. Continued use of the App after changes take effect constitutes acceptance of the updated policy.
