

Urovo i9100 firmware upgrade from SD card

Step 1. Download the OS/UFS file to the SD card storage. And install the SD card on i9100 device.

Step 2. shutdown the i9100 device. Press volume - and power key at the same time for several seconds until the dark screen shows "press power key to reboot device". **Do not** press power at the moment. Please follow step 2 to continue.

Step 3. Press **volume + - + - + + - - (left right left right left left right right)** to enter Android recovery mode, see below. Press volume key to select "Apply update from SD card", and press power key to confirm the selection. Select the OS/UFS file from SD card storage and confirm with power key, and continue with "Yes" to start upgrading.

Step 4. Wait until it finishes and reboot automatically.
