

Oops, I forgot: Fractions between Benchmarks

Build three different fractions that are between zero and one-half

Please represent zero, one-half, and your three new fractions on a number line.

Oops, I forgot...

None of your fractions can have a numerator of 1

Each fraction must have an odd denominator

None of your fractions can be reducible

All your fractions need to be very close to one-quarter

What about your work can stay the same?

What about your work needs to be adjusted?
