https://scratch.mit.edu/

This site requires a log-in, but is free. 3rd & 4th graders already have a log in. If they don't remember it, they can email **daniele@greenecountycsd.net** and I can get it to them. A parent could also create a new account for them. If they look under ideas, there are tutorials available for students to watch and create their own programs.

https://csfirst.withgoogle.com/s/en/home

This website gives tutorials for students to use with Scratch. They will need to go to the website and create an account. They will be asked for a class code to create a log-in. They can use **6g3dkp.** The name of the class is called GCE On-line. There will be activities in the class that can click on for tutorials.
