

SQL Videos to Watch

Handout 08 - CSE 3330

So that we can hit the ground running with SQL, there are some YouTube videos that I'd like you to watch before Monday.

Before you start watching, log into your vagrant machine and install PhpMyAdmin, a web-based MySQL management tool written in PHP. After you've ssh'd into your vagrant box, execute the following

```
sudo apt-get install phpmyadmin
```

Choose options to let it install the phpmyadmin database.

To access phpmyadmin, in a host machine browser, go to

```
http://<vagrant-box>/phpmyadmin
```

where vagrant-box is one of the several ways to get to your vagrant box including **localhost:port**, the private IP assigned to your vagrant box, etc.

Then, watch videos from TheNewBoston's MySQL Database Tutorial.

<https://www.youtube.com/playlist?list=PL32BC9C878BA72085>

Watch videos **#3** (Creating a Database) through **#12** (Are you IN or are you NOT IN?)
