14. NVIDIA — official site, cited as an example of a fabless chip designer.
<https://www.nvidia.com>
15. AMD — official site, cited as an example of a fabless chip designer.
<https://www.amd.com>
16. Apple — official site, cited as an example of a chip designer (M-series).
<https://www.apple.com>
17. Qualcomm — official site, cited as an example of a chip designer (Snapdragon).
<https://www.qualcomm.com>
18. Network World — explainer on what GPUs are and why parallel processing makes them the engine of AI.
<https://www.networkworld.com/article/3966130/what-are-gpus-inside-the-processing-power-behind-ai.html>
19. CNBC — Nvidia holds roughly 70-95% of the AI accelerator market, and the CUDA-plus-H100 combination acts as a moat competitors struggle to cross.
<https://www.cnbc.com/2024/06/02/nvidia-dominates-the-ai-chip-market-but-theres-rising-competition.html>
20. NVIDIA — Blackwell architecture page, the architecture used for its AI GPUs.
<https://www.nvidia.com/en-in/data-center/technologies/blackwell-architecture>
21. Lenovo glossary — explainer on the x86 chip architecture used by Intel and AMD CPUs.
<https://www.lenovo.com/in/en/glossary/x86>
22. Intel — official site, cited as one of the two controllers of x86.
<https://www.intel.com>
23. Yahoo Finance — the Intel-AMD duopoly: Intel holds over 80% of PC processors and about 99% of the server market.
<https://finance.yahoo.com/news/intel-amd-duopoly-pc-processor-160640925.html>
24. Arm Holdings — official site, owner of the ARM architecture used in smartphones.
<https://www.arm.com>
25. Forbes — Arm's near-total (~99%) share of smartphone processor architecture despite low licensing revenue.
<https://www.forbes.com/sites/bethkindig/2024/03/21/arm-stock-ai-chip-favorite-is-overpriced>
26. NVIDIA Blackwell architecture resource (see p.6) — the chip-design specifications (memory size, core count, features).
<https://resources.nvidia.com/en-us-blackwell-architecture>
27. ASML — 'Busting ASML myths': the EUV monopoly, the ~100,000 parts in a machine, and the 40 containers / 3 cargo planes / 20 trucks needed to ship one.
<https://www.asml.com/en/news/stories/2022/busting-asml-myths>
28. Medium (VentureVine) — Carl Zeiss is the only company in the world able to produce the ultra-precise multi-layer EUV mirrors and projection optics ASML needs.
<https://medium.com/venturevine/asml-d880d453f85d>
29. Samsung Electronics — official site, cited as TSMC's closest foundry competitor.

<https://www.samsung.com>

30. Intel Foundry — official site, cited as a competing foundry business.

<https://www.intel.com/foundry>

31. Yahoo Finance — TSMC holds about 72% of the general foundry market versus Samsung's 7%, and well over 90% in advanced AI chips.

<https://finance.yahoo.com/news/chipmaker-one-largest-companies-market-161300883.html>

32. SK hynix — official site, the South Korean memory maker.

<https://www.skhynix.com>

33. Micron Technology — official site, the US memory maker.

<https://www.micron.com>

34. Yahoo Finance — the memory market as a strong oligopoly between Micron, SK hynix and Samsung.

<https://finance.yahoo.com/markets/stocks/articles/micron-jumps-7-memory-maker-152818815.html>

35. TweakTown — next-generation HBM designs combining GPU and HBM, and why memory bandwidth governs AI GPU speed.

<https://www.tweaktown.com/news/109112/the-next-gen-hbm-chips-will-combine-both-gpu-and-hbm-for-future-ai-chips-from-meta-and-nvidia/index.html>

36. Yahoo Finance — SK hynix as HBM leader with roughly 62% market share.

<https://finance.yahoo.com/news/why-micron-sk-hynix-could-130900749.html>

37. Medium — history and applications of Tensor Processing Units and how AI chips are connected into large clusters.

https://medium.com/@decoded_cipher/tensor-processing-units-both-history-and-applications-b3479d92a61d

38. Microsoft Azure — official site, cited as a hyperscale cloud operator.

<https://azure.microsoft.com>

39. Google Cloud — official site, cited as a hyperscale cloud operator.

<https://cloud.google.com>

40. Amazon Web Services — official site, cited as a hyperscale cloud operator.

<https://aws.amazon.com>

41. Oracle Cloud Infrastructure — official site, cited as a hyperscale cloud operator.

<https://www.oracle.com/cloud>

42. EE Times — the trillion-dollar race to fragment Nvidia's monopoly and the scale of hyperscaler GPU purchases.

<https://www.eetimes.com/the-trillion-dollar-race-to-fragment-the-nvidia-monopoly>

43. OpenAI — official site, cited as a frontier AI model company.

<https://openai.com>

44. Anthropic — official site, cited as a frontier AI model company.

<https://www.anthropic.com>

45. Google DeepMind — official site, cited as a frontier AI model company.

<https://deepmind.google>

46. xAI — official site, cited as a frontier AI model company.

<https://x.ai>

47. Meta AI — official site, cited as a frontier AI model company.

<https://ai.meta.com>

48. Microsoft — explainer on how AI model training works and the kinds of data (websites, papers, video, code) models train on.

<https://www.microsoft.com/en-us/microsoft-copilot/for-individuals/do-more-with-ai/general-ai/how-does-ai-model-training-work?form=MA148W>

49. Effectrode — vacuum tubes in 1940s computer applications and why they made machines room-sized, hot and unreliable.

<https://www.effectrode.com/news/tubes-computer-applications>

50. Computer History Museum — the 1947 invention of the transistor.

<https://www.computerhistory.org/revolution/digital-logic/12/273>

51. Nobel Prize educational resource — the history of the integrated circuit and the 'tyranny of numbers' wiring problem.

https://educationalgames.nobelprize.org/educational/physics/integrated_circuit/history/index.html

52. imec — history of the microchip, including Kilby's and Noyce's silicon integrated circuit.

<https://www.imec-int.com/en/what-we-offer/semiconductor-education-and-workforce-development/microchips/history>

53. Computer History Museum — the Intel 4004 (1971), the first commercial microprocessor, with 2,300 transistors.

<https://www.computerhistory.org/revolution/digital-logic/12/285>

54. ASML — official product page for EUV lithography systems.

<https://www.asml.com/en/products/euv-lithography-systems>

55. ASML (LinkedIn) — key published specifications of an EUV machine, including its size and ~150,000 kg weight.

https://www.linkedin.com/posts/asml_time-to-nerd-out-here-are-some-key-specs-activity-7158450887667924992-iSIA

56. The Industry Outlook — ASML's High-NA EUV machine and its roughly \$400 million price tag.

<https://www.theindustryoutlook.com/machinery-and-equipment/innovations/asml-s-highna-euv-machine-set-to-rewrite-ai-chip-production-nwid-16650.html>

57. Simple Flying — the price of a top-model Boeing 787-9 Dreamliner (~\$338 million), used as the cost comparison against an EUV machine.

<https://simpleflying.com/how-much-boeing-787-9-dreamliner-cost-2026>

58. Medium — EUV machines ship in about 250 crates and take roughly 250 engineers six months to assemble.

<https://medium.com/@bailey55015/how-we-beat-tsmc-on-forty-year-old-equipment-6ef8adda5b34>

59. ASML — light and lasers: why older wavelengths failed and how ASML moved to 13.5 nanometre EUV light.

<https://www.asml.com/en/technology/lithography-principles/light-and-lasers>

60. ZEISS — EUV lithography: 13.5 nm wavelength, structures 5,000 times finer than a human hair, and 57 billion components on a fingertip-sized chip.

<https://www.zeiss.com/semiconductor-manufacturing-technology/inspiring-technology/euv-lithography.html>

61. ASML — lenses and mirrors: multilayer mirrors polished to below one atom of roughness (the 'Germany-sized mirror with a 1 mm mountain' comparison).

<https://www.asml.com/en/technology/lithography-principles/lenses-and-mirrors>

62. Tom's Hardware — reports that China reverse-engineered an EUV tool in a covert lab, can generate 13.5 nm light, and targets prototypes by 2028.

<https://www.tomshardware.com/tech-industry/semiconductors/china-may-have-reverse-engineered-euv-lithography-tool-in-covert-lab-report-claims-employees-given-fake-ids-to-avoid-secret-project-being-detected-prototypes-expected-in-2028>

63. Press Information Bureau — government release on India's standing in AI skills and adoption, used for the 'Indians are on top in AI' hook framing.

<https://www.pib.gov.in/PressReleasePage.aspx?PRID=2206767®=3&lang=1>

64. Millennium Post — argument that India chose a services model over owning technology while Taiwan, Japan and the Netherlands built hardware dominance.

<https://www.millenniumpost.in/opinion/india-losing-the-ai-race-663278>

65. Analytics India Magazine — survey in which 62% of Indian technologists named weak home-grown R&D and IP as the primary barrier, ahead of capital, regulation and compute.

<https://analyticsindiamag.com/ai-news/majority-of-indian-techies-say-country-lags-in-ai-race-survey>

66. BBC — why Nvidia's valuation exceeds OpenAI's, and AI as a capital-expenditure and semiconductor story.

<https://www.bbc.com/news/articles/cp8e970vn5vo>

67. The Guardian — ASML halted advanced chipmaking exports to China in early 2024 after US pressure on the Dutch government.

<https://www.theguardian.com/technology/2024/jan/02/asml-halts-hi-tech-chip-making-exports-to-china-reportedly-after-us-request>

68. BBC — US restrictions on TSMC supplying manufacturing equipment and finished products to China.

<https://www.bbc.com/news/articles/creve4x8drgo>

69. Bloomberg — the US pulled TSMC's waiver for shipping chip supplies to China (Sept 2025).

<https://www.bloomberg.com/news/articles/2025-09-02/us-pulls-tsmc-s-waiver-for-china-shipments-of-chip-supplies>

70. Mobile World Live — TSMC barred from exporting 7 nm chips to Chinese clients, slowing Huawei's advanced AI chip plans.

<https://www.mobileworldlive.com/regulation/tsmc-barred-from-exporting-7nm-chips-to-china-clients>

71. Business Standard — China's ban on Nvidia AI chips and US export controls on H100, H200 and B200, with Huawei and Cambricon as beneficiaries.
