

The entire document must be aligned to the left (not justified), text should be single-spaced, A4 size sheets, 2.5 cm margins on each side, Times New Roman font with 12 pt. font size.

Title of the article (sentence type, centered, 12 pt. body, Times New Roman font, maximum 300 characters): Abbreviated title (subtitle): (sentence type, 12 pt. body, Times New Roman font, maximum 100 characters)

Note for Authors: At this submission stage, it is not necessary to include detailed information such as full names, affiliations, or the corresponding author's email address in the manuscript. Instead, please ensure that all required details are accurately entered in the submission system metadata, including complete affiliations, ORCID identifiers, and the corresponding author's email. Providing this information correctly will facilitate the proper processing and publication of your manuscript.

Title (sentence type, left alignment, 12 pt. body, Times New Roman font, maximum 300 characters):

Abstract: in English, written as a continuous paragraph of maximum 400 words. Briefly detail the main objectives of the study; explain how the study was conducted, including any model organism used, but without going into methodological details; summarize the most important results and their significance. It should not include bibliographic citations or abbreviations and should not be separated into paragraphs.

Keywords: No more than 10 words or phrases, not previously used in the manuscript title.

Resumen: Translation into Spanish of the Abstract, with the same characteristics.

Palabras clave: Translation into Spanish of the Keywords.

Text (sentence type, left alignment, body 12 pt.)

- **Tables (uppercase type, bold, centered, 12 pt. body. Add them throughout the development of the manuscript).**

Tables should be cited in the text with Arabic numerals in the order of appearance. Examples: "Table 1" "Tables 1-3".

Each table should have its own explanatory caption, which should be understandable without reference to the text and should be placed before the table. Each caption will begin with the table number.

Example: Table 1. Comparison of the effects...

Include units in column and row headings in parentheses.

If necessary, place footnotes at the bottom of the table linked with the following symbols in the same order: *, †, ‡, §, ||, ¶. However, it is preferable to place any important aspects as part of the caption.

TABLE 1: description of the table and its source

Title	Title	Title
Data	Data	Data

- **Figures (capital type, bold, centered, body 12 pt. Add them throughout the development of the manuscript).**

The term Figure refers to all types of images, including graphs, drawings, photographs and maps. Figures should be cited in the text with Arabic numerals in order of appearance using the abbreviation "Fig". Example: "Figs. 1-3"

In the initial submission, figures should be in low resolution, provided they are legible, and included in the text file of the manuscript. However, once the manuscript is accepted, figures should be sent in high resolution (minimum 300 dpi, 600 dpi recommended) in one of the following formats: *.tiff, *.eps, *.emf, *.bmp, as separate documents from the text file.

Each figure will be succeeded by its caption. The caption will be self-explanatory, must be understandable without reference to the text and will be placed after the figure. Each caption will begin with the figure number.

Example: Figure 1... Map of the region...

Figures drawn with lines (line artwork) are best prepared in vector-based graphic programs (e.g. Corel Draw, Illustrator, Freehand, Inkscape, ArcView). It is therefore recommended to present them in *.eps format. Do not use lines of less than 0.3-point width.

Black and white photographs, color photographs and maps and graphics made in raster-based programs (e.g. Photoshop, Gimp) should be submitted in *.tiff format. For *.tiff files, note that resolution is irrelevant, size in pixels is important, so we recommend a minimum size of 1000 pixels.

Any manuscript that includes a study site should include a map of the site. Such a figure should: (1) be surrounded by a border with thin lines, (2) be geographically referenced with latitude and longitude coordinates and a small inset map indicating the general location, (3) have a scale bar in km, (4) have an arrow indicating North (do not use a compass rose), and (5) have reference lines such as country boundaries, roads, rivers, or elevations, extending to the border.

For all figures, use lines with a thickness between 0.3-1.0 point and 12-point font sizes.

If you want to add several images as a single composite figure or create a page-long, multi-image plate, do not worry about the layout of the plate. In the first submission of the manuscript, you should not assemble such a figure, but place the caption of the figure and then paste each image separately. Each image should have its own designation through capitals (e.g., A) placed in the lower right corner of each image. As the manuscript moves through the publication process, the journal's design team will assemble and design your composite images or plates.

Eliminate unnecessary white space or gaps around figures. Include the respective credits of the figure in the caption. Remember that it is the author's responsibility to have the necessary permissions to reproduce the figure under the journal's [Creative Commons License](#).

If you use a map as a figure, you must cite the source of the map. If possible, use maps that are in public use or allow unrestricted use. If you use Google Earth or Google Maps, you must follow [Google's attribution guidelines](#).

FIGURE 1: *ACI Avances en Ciencias e Ingenierías* journal logo

Acknowledgements (sentence type, left alignment, body 12 pt.): This section includes: an explicit statement of the sources of financing that allowed the development of the work; details of the permissions or authorizations for the development of the research and the institutions that issued them; those who have contributed to the work, but who do not meet the requirements of authorship may be mentioned in the acknowledgements with a description of their contributions. Authors are responsible for ensuring that all persons named in the acknowledgments agree with this.

Authors' contributions (sentence type, left alignment, body 12 pt.)

This section must detail each author's individual contribution. The use of the [CRediT Taxonomy](#) is recommended. Any use of technological or AI tools should be clearly stated, including their specific purpose (e.g., language editing, data analysis, figure generation, etc.).

To be considered an author in the journal *ACI Avances en Ciencias e Ingenierías*, it is necessary to meet the four criteria recommended by the [ICMJE](#).

Declaration of Generative and AI-assisted Technologies in the Writing Process

For this work, the author(s) used *[NAME OF THE TOOL / SERVICE]* in order to *[REASON]*.

Afterwards, the author(s) reviewed and edited the content as deemed necessary and take(s) full responsibility for the final version and the published content.

Data Availability Statement: Authors must clearly indicate the status of the data used in their research by selecting one of the following options:

- Data are available in an open-access repository. Authors must provide the name of the repository and a persistent identifier (preferably a DOI or a permanent link).
- Data are available upon reasonable request to the corresponding author (in exceptional cases).
- No data were used in this study.

Authors are reminded to follow the FAIR principles for data management whenever possible. To promote transparency, traceability, and reuse, the use of open-access repositories that issue DOIs, such as Zenodo, Figshare or Dryad, is strongly encouraged.

For code repositories like GitHub, integration with Zenodo is recommended to generate DOIs for specific versions.

Conflict of Interest

Authors must declare whether or not they have conflicts of interest in this research.

References (sentence type, left alignment, body 12 pt.)

In the text, use numbered quotations placed at the end of the sentence in square brackets. The numbers of different quotations should be separated by commas, unless it is a continuous range of quotations in which case a hyphen should be used. Examples: [10] [10,15,22] [12-20].

Number citations sequentially as they appear in the text (NOT in alphabetical order of references).

Cite unpublished papers, papers in preparation or under review as "(unpublished data)", preceded by the author's initials and surname. For example: A. Suarez (unpublished data).

Use as many references/citations/sources as possible that are indexed in Scopus.

Citations of information from e-mails, letters or documents sent between collaborators should be avoided, but if absolutely necessary, they should be referred to as "com. pers." when they correspond to comments without correspondence support, and as "in litt." when there was written correspondence. In both cases, preceded by the initials and surname of the contributor and followed by the year. For example: (J. Muñoz in litt. 2009) (J. Muñoz com. pers. 2010).

Subtitle the list of references as **References**

Sort the list of References according to the sequential order in which they appear in the text of the manuscript (**NOT in alphabetical order**).

The format of the references should follow the [APA style \(7th Edition\)](#). If the article has an active DOI, the DOI should be included at the end of the reference.

Authors (Year). Title of the work. Publication data.

Examples:

[2] Sharma, A. K., Bhandari, R., Aherwar, A., & Rimašauskiene, R. (2020). Matrix materials used in composites: A comprehensive study. *Materials Today: Proceedings*, 21(3), 1559-1562. <https://doi.org/10.1016/j.matpr.2019.11.086>

Nomenclature guidelines (to be taken into account throughout the development of the manuscript)

ACI Avances en Ciencias e Ingenierías complies with the requirements established by the different nomenclature codes regarding the validity for the description of new species and the availability of articles online as published works, including the

[International Code of Zoological Nomenclature and the International Code of Nomenclature for algae, fungi, and plants.](#)

The journal will be responsible for obtaining records and GUID (LSID) in Zoobank, IPNI and Mycobanl or Index Fungorum.

Authors should adhere to the guidelines established by the international codes of nomenclature respective to the organism treated.

Descriptions of new species of living organisms or taxonomic analyses should follow the provisions of the respective nomenclatural code.

When a biological taxon is mentioned for the first time, its common name (as a proper name) should be written followed by its scientific name in italics, for example: Spectacled Bear *Tremarctos ornatus*. Do not place the scientific name or common name in parentheses. Later in the manuscript, only the scientific name or common name may be used.

If the manuscript corresponds to a taxonomic analysis or if there is controversy regarding the nomenclature of the organism studied, present the name of the taxon followed by the taxonomic authorship data when mentioning it for the first time. The taxonomic authorship data for zoological names are the surnames of the descriptors and the year of description, separated by a comma, e.g., *Grallaria ridgelyi* Krabbe et al., 1999. The taxonomic authorship of botanical names should follow that specified in [The International Plant Names Index](#). Place taxonomic authorship in parentheses only if there was a change at the genus level. When there are three or more descriptors use "et al." without italics.

Guidelines for supplementary material

Authors may publish supplementary material with their manuscript. This material corresponds to information that complements or provides support to the published manuscript and can be downloaded as independent files.

Different types of information can be included as supplementary material: extensive texts on methodologies, databases, video, audio, photographic and other audiovisual support, among others. The Supplementary Materials replace the Appendices.

These materials will be cited at the end of the manuscript with links to the journal's website where they will be freely available to the public.

If the supplementary material is composed of text, it should be presented with the same general format required for the manuscript.

If necessary, cite Supplementary Material files in the following format: Fig. S1, Table S1, Data S1, Videos S1, Article S1, Audio S1. Where the S indicates supplementary material, and the number indicates the numerical sequence of the supplementary material.

To maximize compatibility, we suggest that you submit your Supplementary Material in the following formats: Images in *.tiff, *.eps, *.emf, *.bmp, *.png or *.jpg; tables in *.xls or *.xlsx; text in *.doc or *.docx; videos in *.avi, *.mov or *.mp4; and audio files in *.wav or *.mp3.

Large supplementary data sets can be submitted in compressed format (*.zip, *.z, *.tar or *.rar).

Guidelines for equations (to be taken into account throughout the development of the manuscript)

When writing in MS Word, use MathType to generate and display equations, otherwise Equation Editor is also suitable.

Number equations on the right side in parentheses. For example:

$$\Delta t = \Delta t_1 + \Delta t_2 + \Delta t_3 \quad (1)$$

Do not use MathType or Equation Editor to place variable signs, Greek symbols, or mathematical operators in the general text of the manuscript. In these cases, insert the symbols as normal text with the correct Unicode (hex) values.
