

7.4. Energy and the community

7.4.4. Policy development for clean energy technology

Description:

The Vocational Education Program has plans to reduce energy consumption, including by:

1. In 2022, the UI Vocational Education Program has installed solar panels with a capacity of 15 kWp.

2. Educational poster to reduce vehicle emissions

3. Replacing conventional equipment by using energy efficient equipment, such as using LED lights in all vocational areas. Currently, only 50% of LED lights and sensors

have been installed. In the future, all lights will be replaced with LED lights or sensor lights

Sensor light

4. Energy saving educational stickers in every room
