

What Is Physical Security and How Does the California Safety Agency Help?

Physical security involves protecting property and personnel from unfriendly physical actions or any other event that can lead to losses or damages to an institution, enterprise, or residential property. The California Safety Agency prioritizes physical security with its trained team and modernized resources.

The main components of physical security include access control, testing, and surveillance. The California Safety Agency offers surveillance and access control. Let's discuss each in detail to help you know how it's of great importance.

- Access Control

To maximize the security of your office or residential property, you need to control and limit access. Access control is the measure taken to ensure that specific sites, materials, and facilities are only exposed to authorized individuals.

You can use [onsite security personnel](#), alarm response, or corporate patrol in access control. Security personnel and [alarm response](#) are the best combinations since they work tactically to track and alert you about unwanted intruders.

- Surveillance

Onsite security personnel can't always ensure top-notch security in one place throughout the day and night without getting tired. Even if you get the most [dedicated corporate personnel](#), there are some key events they might not capture.

Therefore, you also need to have sophisticated surveillance to prevent intrusion and also help you in the recovery of lost items.

[Camera monitoring](#), patrol guards, and notification systems like alarm responses are examples of surveillance systems. The commonest of all is the closed circuit television (CCTV) cameras. They offer reliable and uncorrupted visual evidence.

- Testing

Testing is essential because it helps you know how well your home or business can identify, respond and contain a hazard. Active testing involves the use of disaster recovery policies and procedures.

Conclusion

Every home and office needs physical security. You can find surveillance and access control entities from the California safety agency. [Click here to learn more](#) about the California security agency and its services.
