Software Engineer with 5+ years of experience in building, testing and maintaining applications for remote companies. Played a key role in the development of a real estate crowdfunding platform for low-income individuals. Built a secure legal data system that automated 90% of tasks. Helped local banks reduce loss while at PwC and reduced project size by 50% while optimizing performance by 36% at RD Land. Currently interested in building products that improve healthcare.

Skills

- **Spoken Language:** English
- **Technical Languages:** Python, Javascript (ES6), Typescript.
- **Technologies:** Next.js, React.js, Remix.js, React Native, Node.js, Zustand, Redux, Django, FastAPI, Prisma, Jest, Cypress, TailwindCSS, PostgreSQL, MongoDB, AWS, Docker, CI/CD, OpenAI.

Experience

Founding Software Engineer - Adoyen, Virginia, United States

SEPTEMBER 2021 - MAY 2025

- Built a platform to make real estate investing accessible to lower-income individuals, featuring social media integration to foster learning and growth as an investor, and made available on both web and iOS platforms.
- Reduced API latency by 32% through database query optimization.

Fullstack Engineer - The Grid Management, Lagos, Nigeria

JANUARY 2024 - NOVEMBER 2024

- Launched a legal data management platform, automating payment subscriptions and 90% of administrative tasks.
- Led backend engineering for a platform similar to LinkedIn enabling creatives to network, collaborate, and connect with businesses for opportunities.

Software Engineer - PwC Nigeria, Lagos, Nigeria

MARCH 2023 - NOVEMBER 2023

- Developed a concession management system for traditional banks, enabling real-time monitoring of customer concessions and improving profitability through better decision-making processes.
- Integrated CubeJS to provide real-time reports on data empowering informed business decisions.
- Mentored a cohort of 3 interns through hands-on projects, fostered skills in modern programming languages and best practices for real-world software development challenges.

Frontend Engineer - RD Land, London, United Kingdom

AUGUST 2022 - APRIL 2023

- Led the NFT Marketplace, ticketing system, and user dashboard development, reducing project size by 50% and increasing efficiency by 36% through codebase refactoring and workflow enhancements.

Internships

Full Stack Web Developer - SmartShop Digital Marketing Ltd, Lagos

MAY 2021 - SEPTEMBER 2021

Collaborated with the CEO to develop SaaS products tailored for hospitals, enhancing patient information management and creating detailed documentation to help staff easily understand and use the tools effectively.

Full Stack Web Developer - HNGi8 Internship, Hotels NG, Lagos

AUGUST 2021 - OCTOBER 2021

- Navigated a competitive selection process among 19,375 global applicants, surpassing ten rigorous stages to secure one of 330 final internship positions.
- Led three teams, each with 100 members, solving critical problems while driving collaboration and achieving success during the internship.

Education

BS in Computer Science - Landmark University, Omu-Aran, Kwara

Developed expertise in data structures, algorithms, and other Computer Science domains while mentoring peers as a leader within Google's Developer Student Clubs. Earned First Class Honors upon graduation.

Projects

Sense N' Style

Launched a social media platform similar to instagram connecting users including fashion brands, photographers, and other professionals in the fashion industry.

Medica

Initially created to help my sister study, this AI-driven platform helps medical practitioners prepare for certification exams like the MRCGP through realistic simulations and personalized feedback.

NextStream

Developed a streaming platform similar to Netflix, tailored for small businesses to market and stream their products, offering users an immersive virtual cinema experience.
