**Daily Trivia**

**Youtube video link**: https://youtu.be/HSv4UL7g3gw

**Programming Language**:Javascript

**Purpose**:The purpose of Daily Trivia is to provide fun and entertaining facts for everyone.

**Short Description:** My app tries to accomplish giving people random facts about certain topics to tell friends and family. I chose to include facts about toys, food, movies/shows, oceans, animals, video games, fashion, science, music, art, and nature.

**Difficulties**: There wasn't much technical difficulty, but while I was coding I was having problems relating to renaming the buttons, because everytime I renamed something I was forgetting to go back and change the code. Also one time I clicked the wrong thing and messed my entire code up, but I went back to a previous version.

**Improvements**: Some updates that I could apply to the next version include more facts, more topics/categories, a button that will randomize facts from every topic, and an option that will give you trivia questions to answer.
